- ❖ Typically, wordnets and linguistic ontologies are used in understanding and retrieving **unstructured information** in many NLP in IR tasks, such as:
  - **Information Search and Retrieval** - to enrich queries and improve the quality of the results, i.e., meaningful search rather than string-matching search; cross lingual IR, etc.
  - **Machine Translation, Word Sense Disambiguation ...** – as a sense inventory to determine the intended meaning of a term within a context;
  - **Classification** –to classify information and documents.
  - **Data Integration and Interoperability** - as a semantic reference to several autonomous information systems;
  - **Semantic Web** - as a semantic reference to disambiguate the meanings used in the web sites;
  - among many, **many other applications.**

- ❖ Typically, wordnets are used in understanding and retrieving **unstructured information** in many NLP in IR tasks, such as smart information retrieval, word sense disambiguation, classification, translation, and data integration.
- ❖ **New demands** are emerging to use wordnets like ontologies: to manage and retrieve **structured data** in e.g., cross lingual Big Data, and medical informatics, **Knowledge Graphs**, **Graph Neural Networks**, etc.

The screenshot shows a Google Scholar search interface. The search bar contains the text "wordnet" and "knowledge graph". Below the search bar, the results are displayed as a list of articles. The first article is titled "A novel word sense disambiguation approach using WordNet knowledge graph" by M AlMousa, R Beniamri, and R Khoury, published in Computer Speech & Language, 2022. The second article is "Unsupervised word-level affect analysis and propagation in a lexical knowledge graph" by M Fares, A Moufarrej, E Jreij, and J Tekli, published in Knowledge-Based Systems, 2019. The third article is "[PDF] Towards Lexical Chains for Knowledge-Graph-based Word Embeddings" by KI Simov, S Boytcheva, and P Osenova, published in RANLP, 2017. The fourth article is "Comparison of word embeddings from different knowledge graphs" by K Simov, P Osenova, and A Popov, published in LDK 2017, Galway, Ireland, June 19-20, 2017. The search results are sorted by relevance, and the search took 0.07 seconds to complete, returning approximately 11,600 results.

Linguistic ontologies used to top knowledge graphs and reasoning ...

**But,**

**Ontologies** are typically application-specific rich axiomatizations;  
**Wordnets** are general-purpose mental lexicons, and thus axiomatizing wordnet would be a **rigidification**.

- How to build a linguistic ontology as a wordnet - to better serve new application scenarios
- The Arabic Ontology is a linguistic ontology (or a formal Arabic WordNet)

# Application Ontology vs Linguistic Ontology

- Typically **rich** axiomatization
  - Each term refers to one concept (**no polysemy**).
  - Synonymy is not a target.
  - Benchmarked to **application's knowledge**.
  - Used by a **certain application** or a class of applications.
- **Light-weight** axiomatization, and cannot be rigid.
  - Each term refers to one or more concepts (**Polysemy**).
  - Synonymy is important.
  - Benchmarked **general knowledge**
  - Used for **general purposes**.

# Arabic Ontology

- Characterization of the intended meaning (i.e., concepts) that the Arabic words convey.
- **Tree of meanings:** classifying concepts is a good way to specify these meaning.
- The classification is **based on intrinsic and distinguishing properties** (using the formal subsumption relation).

# Arabic Ontology

- Each concept is a class of instances
- Each node in the ontology tree is either concept or instance.
- Each concept is described by a gloss, example, and synonyms, etc.
- **Formal Arabic Wordnet** - with ontologically-clean content. The Arabic Ontology is **the next generation of a wordnet**.
- Linked with WordNet, Wikidata, BFO, DOLCE, Qabas, and many lexicons

The screenshot shows the Arabic Ontology web interface. At the top, there is a search bar and navigation tabs for 'Ontology', 'Dictionaries', and 'Morphology'. The main content area displays the concept 'Entity' (شيء) with its definition: 'Whatever existed or will exist, and can be realized or imagined'. Below this, there are four subtypes listed with their definitions and examples:

- Entity** (شيء | كَيْتُوْنَة | كَانين): Whatever existed or will exist, and can be realized or imagined. Example: كل شيء على ما يرام (293198).
- Object** (مَوْجُوْد | كَانين | قَانِم | حَقِيْقِي | وَاقِعِي | شَيْء | ذَات | قِيُوْم): An entity that is wholly and independently present in time, and is realized either for its concrete or social existence. Example: شيء له ذات مستقلة بنفسه، وحاضر كلياً في الزمن، ويُدرَك بذاته قياساً أو لذاته اعتباراً. يختلف إدراكنا لأي موجود لاختلاف ما يميّز أنواعه من الصفات الجوهرية (293200). TypeOf: {Entity}
- Occurrent** (سَيَرُوْرَة | حَادِث | حُصُوْل): An entity realized by the time of its happening. Example: الشيء الذي تُدرَك ذاته وأجزائه بجريانه عبر الزمن لا يمكن فهم أي حدث بشكل منفصل عن الإطار الزمني له (293202). TypeOf: {Entity}
- Dependent Entity** (مُنُوْط | مُعْتَمِد | مُتَعَلِّق | مُشْرُوْط): An entity realized by the time of its happening. Example: شيء يعتمد وجوده على وجود أشياء أخرى. طول المبنى منوط بوجود المبنى وإلا فلا طول له (293201). TypeOf: {Entity}
- Abstract** (مُجَرَّد | تَجْرِيْدِي | غَيْر مَادِي | نَظْرِي): An entity exists only in mind, cannot be measured or socially realized, and

At the bottom of the interface, there is a logo for Birzeit University and the text 'Copyright © 2018'. The page number '14' is visible in the bottom right corner.

# Arabic Ontology

- Current size so far (but the numbers are dynamic)

1800 fully-done concepts (mostly top levels)

17K partially investigated (good for NLP)

Some branches are elaborated, other not yet.

- We provide **English labels** sometimes (but not always) for readability and communication.

- **Methodology:** built **manually** top-down and bottom-up at the same time.

occurent | حُصُول | حُدُوث | سَيُورَة  
An entity realized by the time of its happening  
الشيء الذي تُدرِك ذاته وأجزائه بجريانه عبر الزمن  
example: لا يمكن فهم أي حدث بشكل منفصل عن الإطار الزمني له  
293202 TypeOf : (entity)

process | عَمَلِيَّة  
A cumulative occurrent that is composed of a sequence of actions happening respectively in time  
حدث تراكمي يتكون من سلسلة من الأفعال المترابطة، التي تحدث بشكل متتابع على خط الزمن  
example: هناك ثلاثة أنواع من الخلايا تساهم في عملية نمو العظم  
293215 TypeOf : (occurent)

biological process | single-organism process |  
single organism process | physiological process  
A biological process represents a specific objective that the organism is genetically programmed to achieve. Biological processes are often described by their outcome or ending sta [See More..](#)

## Concept Profile

URL: <https://Ontology.birzeit.edu/concept/293200/profile>

SuperType:293198 InstanceOf: PartOf:

مترادفات: مُوجِد | كَائِن | قَائِم | حَقِيقِي | واقِعِي | شَيْء | ذات | قَيِّم

المعنى: شيء له ذات مستقلة بنفسه، وحاضر كلياً في الزمن، ويُدرك بذاته قياساً أو لذاته اعتباراً

example مختلف إدراكنا لأيّ موجود لاختلف ما يميّز أنواعه من الصفات الجوهرية

Synset: object | independent continuant

Gloss: An entity that is wholly and independently present in time, and is realized either for its concrete or social existence

**– Ontological Analysis:**  
**Description:**  
Objects are physical or social entities that we can point at and realize independently from any other entities. We look at a chair and realize its independent existence, same goes with human beings, artifacts, and also geographical areas. Objects are independent entities that have no temporal parts; i.e. they persist over time maintaining their identity, and have a location in time. This means that objects will always be wholly present in the times they're present in; for example, Jack will always be present, and will always be known and realized as Jack during his entire existence, Birzeit University is wholly present in time, and will always be recognized as itself during its entire existence, my laptop is wholly present in time and will always be recognized as my laptop during its entire existence.

This class "Object" is equivalent to the class that's called "Endurant" in both DOLCE [2] and KYOTO [3], and is equivalent to the class "Independent Continuant" in BFO [1].

Objects have two types based on the way they're realized, either: (1) physically; i.e. physical objects, or (2) socially; i.e. social objects, where there is no instance of object that isn't either a physical object or a social object, and instances of physical objects cannot be social objects and vice versa.

**Formally speaking:**

$\forall x . PhysicalObject(x) \rightarrow Object(x)$  // Every Physical Object is an Object

$\forall x . SocialObject(x) \rightarrow Object(x)$  // Every Social Object is an Object

$\forall x . PhysicalObject(x) \vee SocialObject(x) \leftrightarrow Object(x)$  //The set of all objects is exactly the set of all Physical Objects and the set

# Morphology Level

All terms in the synsets are lemmas in the Qabas (Morphology Database). Thus, linking the semantic level with the morphology level.

## Semantic Level

### Entity | كَيْثُونَةٌ | كَانٍ Entity

Whatever existed or will exist, and can be realized or imagined

أَيَّمَا وُجِدَ أَوْ سَيُوجَدُ وَنَسْتَطِيعُ إِدْرَاكَهُ أَوْ تَخَيُّلَهُ

example: كَلَّ شَيْءٌ عَلَى مَا يَرَامُ

293198 ■

### Synset

### Object | مَوْجُودٌ | كَانٍ | قَائِمٌ | حَقِيقِيٌّ | وَاقِعِيٌّ | شَيْءٌ | ذَاتٌ | قَيِّمٌ Object

An entity that is wholly and independently present in time, and is realized either for its concrete or social existence

شَيْءٌ لَهُ ذَاتٌ مُسْتَقَلَّةٌ بِنَفْسِهِ، وَحَاضِرٌ كَلْبِيًّا فِي الزَّمَنِ، وَيُدْرِكُ بِذَاتِهِ قِيَاسًا أَوْ لِذَاتِهِ اعْتِبَارًا

example: يَخْتَلِفُ إِدْرَاكُنَا لِأَيِّ مَوْجُودٍ لِاخْتِلَافِ مَا يَمَيِّزُ أَنْوَاعَهُ مِنَ الصِّفَاتِ الْجَوْهَرِيَّةِ

293200 ■ TypeOf: {Entity}

### Occurrent | سَيْرُورَةٌ | خُذُوثٌ | حُصُولٌ Occurrent

An entity realized by the time of its happening

الشَيْءُ الَّذِي تُدْرِكُ ذَاتَهُ وَأَجْزَائُهُ بِجَرِيَانِهِ عِبْرَ الزَّمَنِ

example: لَا يَمَكُنُ فِهُمَ أَيُّ حَدَثٍ بِشَكْلِ مُنْفَصِلٍ عَنِ الْإِطَارِ الزَّمْنِيِّ لَهُ

293202 ■ TypeOf: {Entity}

# URIs Design

To be linked with other resources in **the Linguistic Linked Open Data Cloud**, the URLs are designed according to the **W3C's Best Practices for Publishing Linked Data**, as the following:

**Concepts:** each concept is given a URL based on its unique ConceptID:

`https://{domain}/concept/{ConceptID}`

e.g., <https://ontology.birzeit.edu/concept/293254>

**Semantic relations:** to allow one to retrieve, e.g. the instances, of a given conceptID, the semantic relations for a given concept can be accessed through URLs:

`http://{domain}/concept/{Relation}/{ConceptID}`

e.g., <https://ontology.birzeit.edu/concept/instances/293121>

<https://ontology.birzeit.edu/concept/parts/293121>

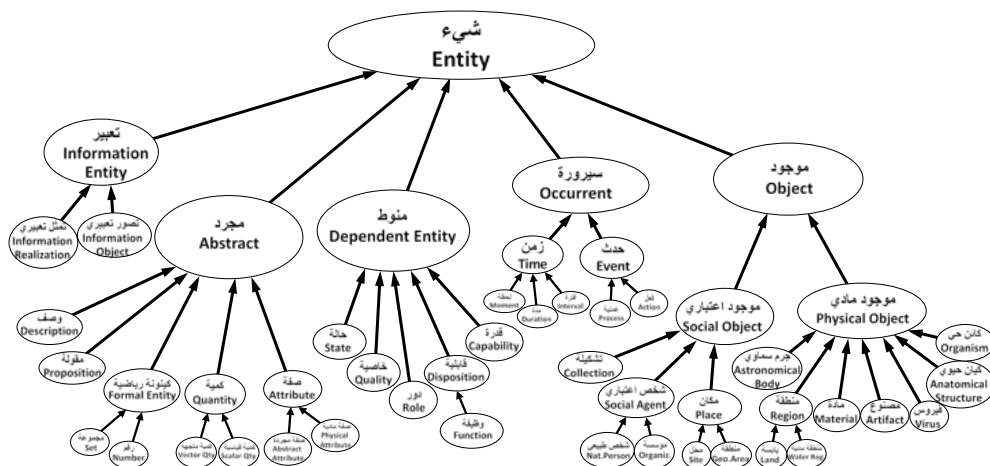

**Terms:** each term is given a URL, which refers to the set of concepts that are lexicalized using a certain term, i.e., that have this *term* among their synsets:

`https://{domain}/concept/{term}`

e.g., <https://ontology.birzeit.edu/concept/virus>

# Linking with Wikidata

Every concept in the ontology is mapped with a Wikidata node

Thus, instances in Wikidata are instances in the ontology

Thus, querying the Wikidata knowledge graph from the Arabic Ontology viewpoint.

# Download Arabic Ontology

Open-Source (CC-BY- 4.0)

Download: <https://ontology.birzeit.edu/about>

# Top Levels of the Arabic Ontology

## الحدود العليا - أمهات المعاني لجميع الكلمات العربية

The top levels of the Arabic Ontology tree are the most abstract concepts in Arabic; they are philosophically and logically well defined, also, linked with BFO and DOLCE upper-levels.

Why these top levels are so important:

- Derive/specialize all Arabic concepts from these top levels.
- Allows us to detect any logical and ontological mistakes in the lower levels.
- Used to governs the correctness and the evolution of the lower levels.

# Top Levels of the Arabic Ontology

## الحدود العليا - أمهات المعاني لجميع الكلمات العربية

The top levels of the Arabic Ontology tree are the most abstract concepts in Arabic; they are philosophically and logically well defined, also, linked with BFO and DOLCE upper-levels.

### Design principles:

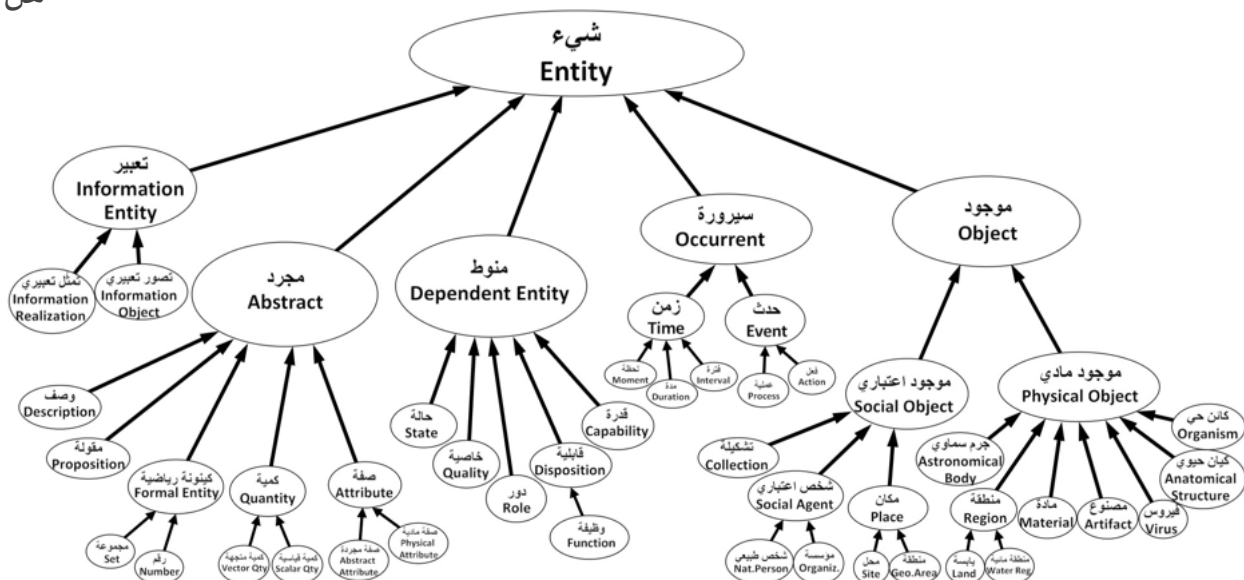

هل تصنيف المعاني (شجرة الانطولوجيا) جامعة مناعة؟

### Totality (جامع):

No other nodes in the same level  
by: Comprehensiveness evaluation

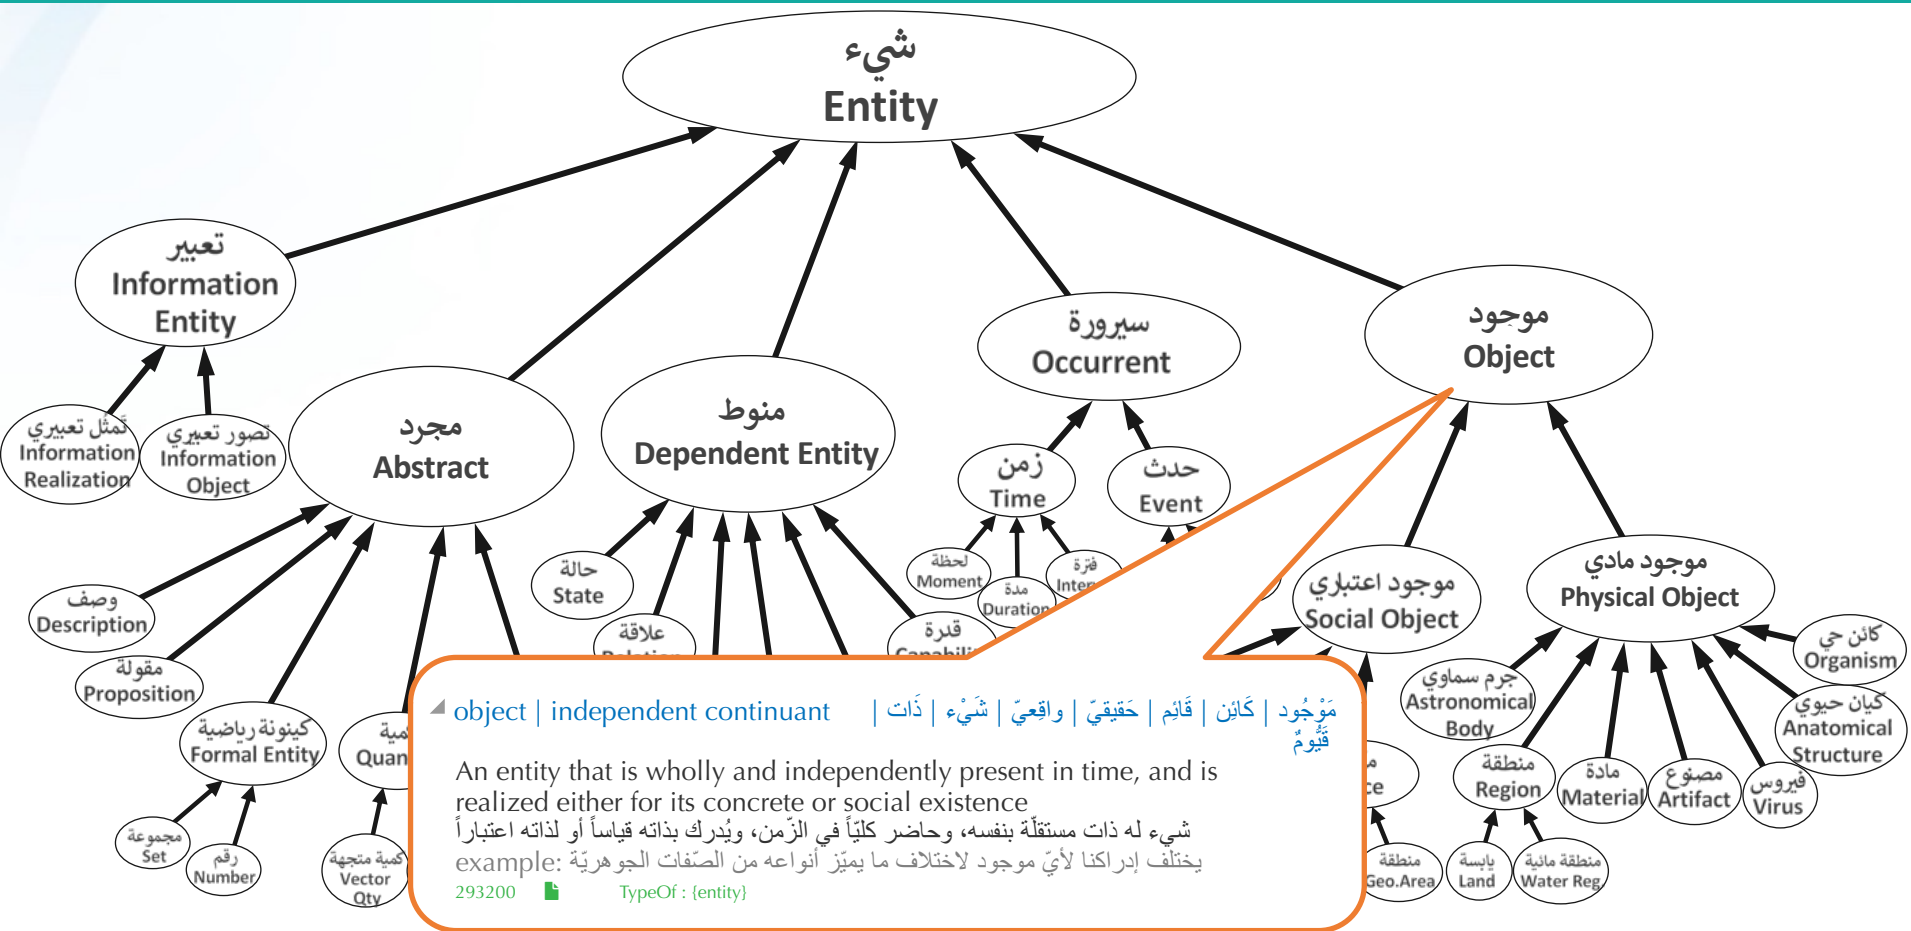

### Disjointness (مانع):

Nodes in the same level are disjoint  
By: definition/design

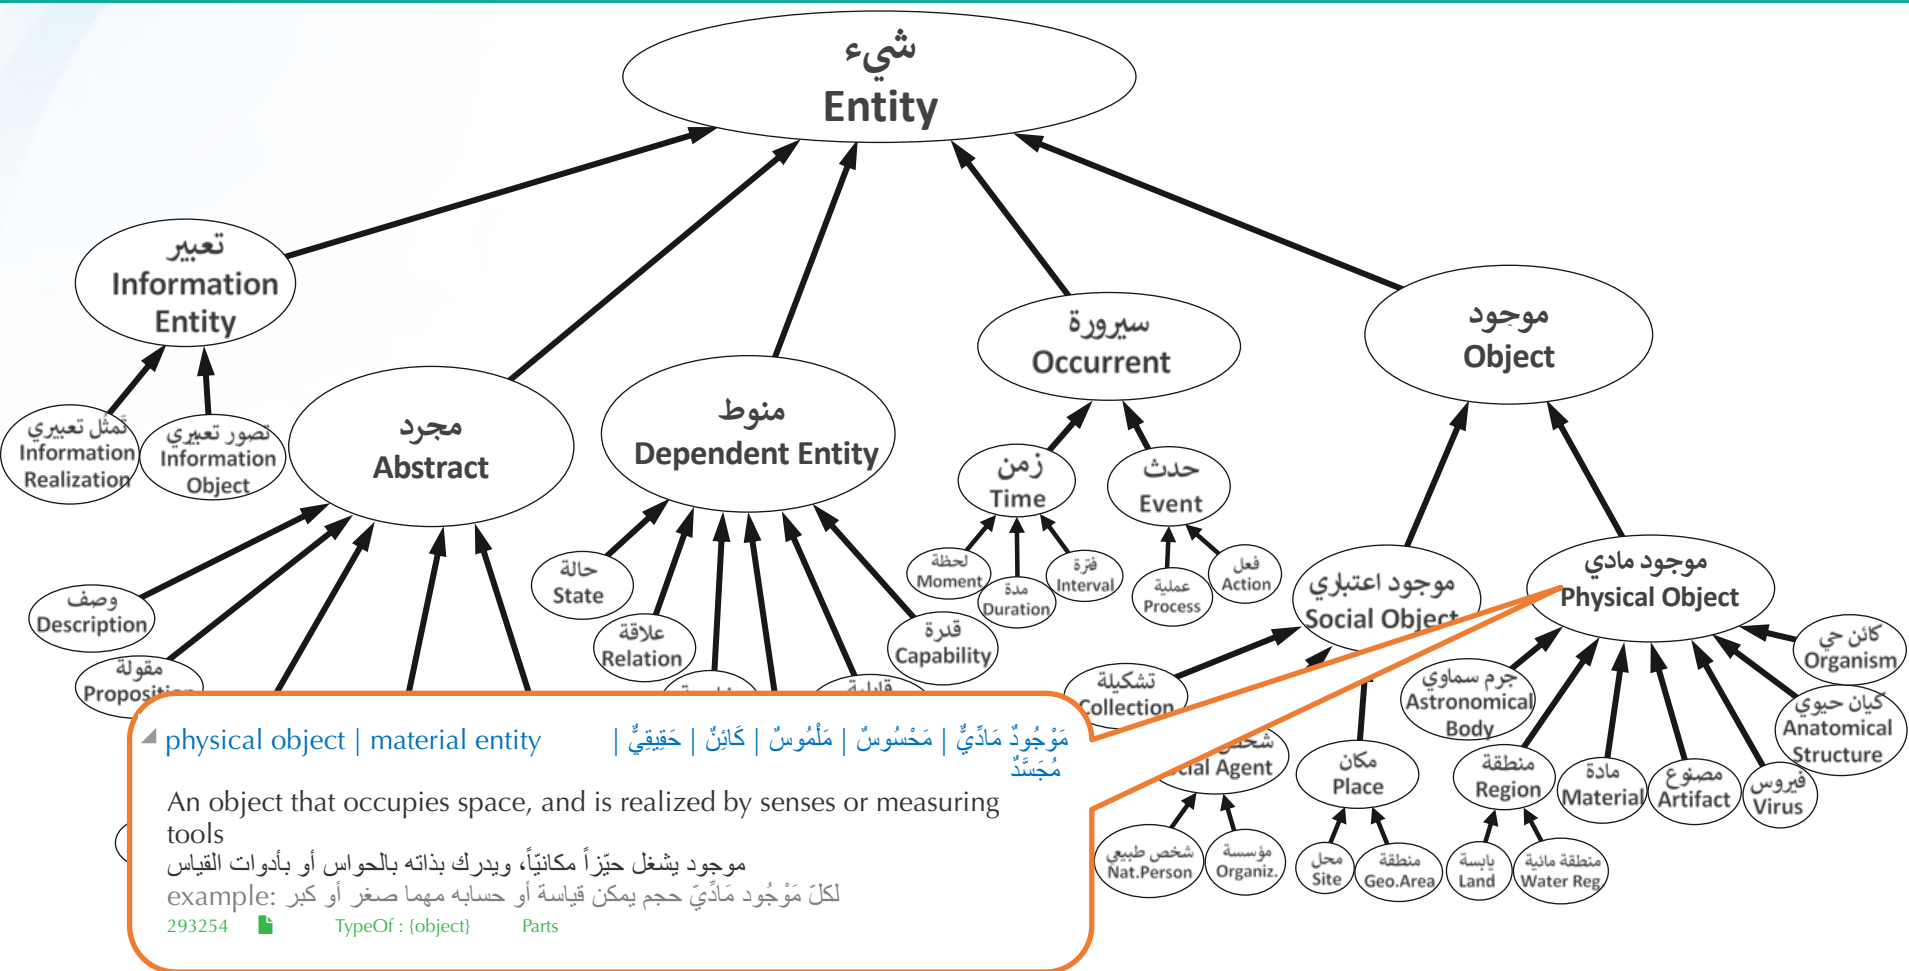

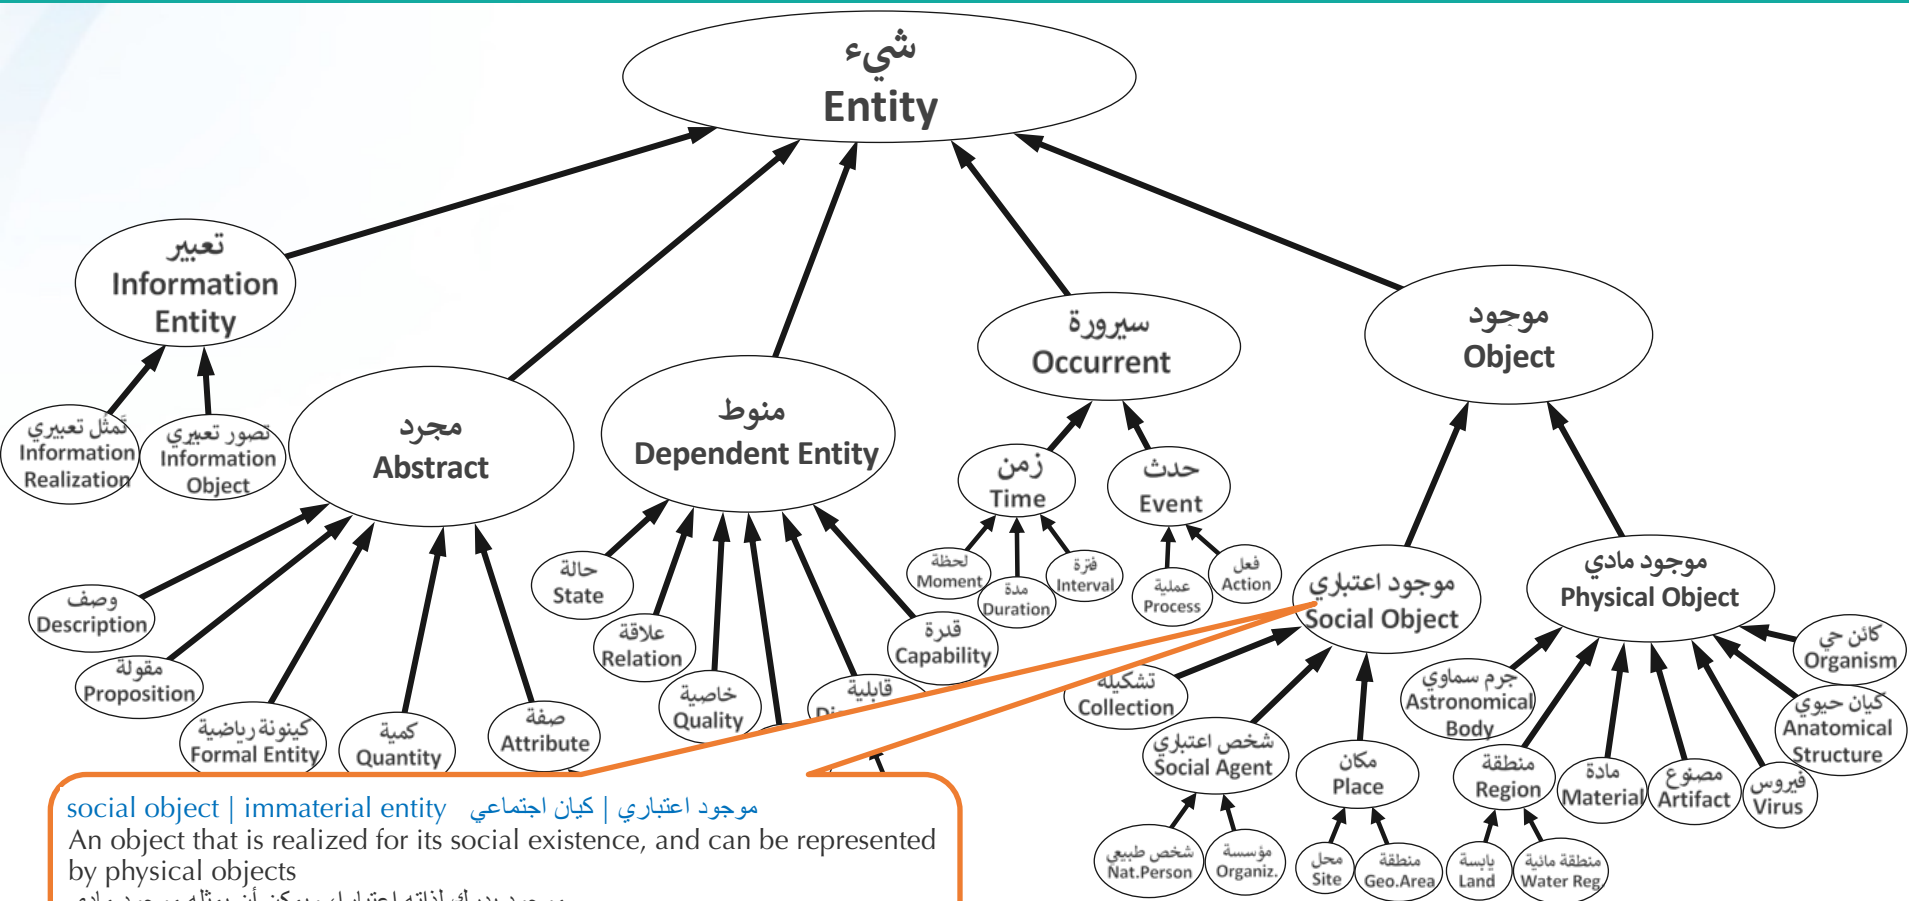

# Top Levels of the Arabic Ontology

# Top Levels of the Arabic Ontology

# Top Levels of the Arabic Ontology

social object | immaterial entity | كيان اجتماعي | موجود اعتباري

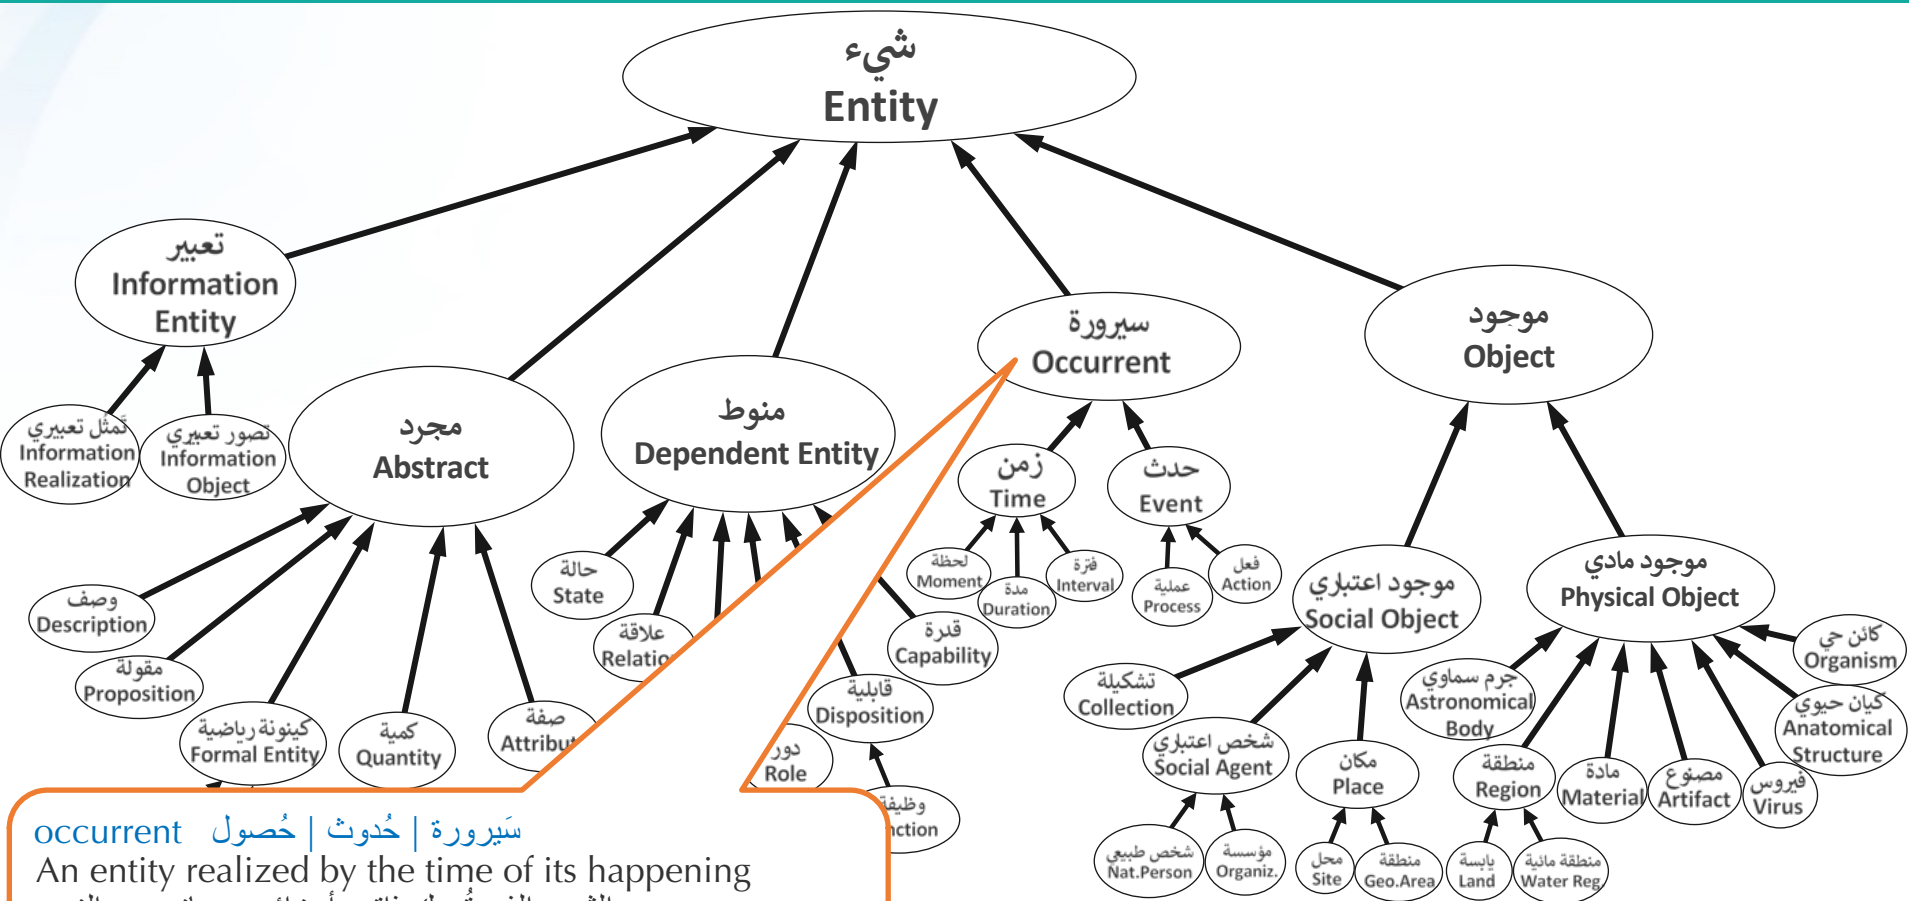

An object that is realized for its social existence, and can be represented by physical objects

موجود يدرك لذاته اعتبارا، ويمكن أن يمثلته موجود مادي

example: جامعة بيرزيت كمؤسسة هي موجود اعتباري ولها ممثل قانوني يمثلها أمام الآخرين

293255 TypeOf: {object}

# Top Levels of the Arabic Ontology

سيرة | حدوث | حصول | occurrent

An entity realized by the time of its happening

الشيء الذي تُدرك ذاته وأجزائه بجريانه عبر الزمن

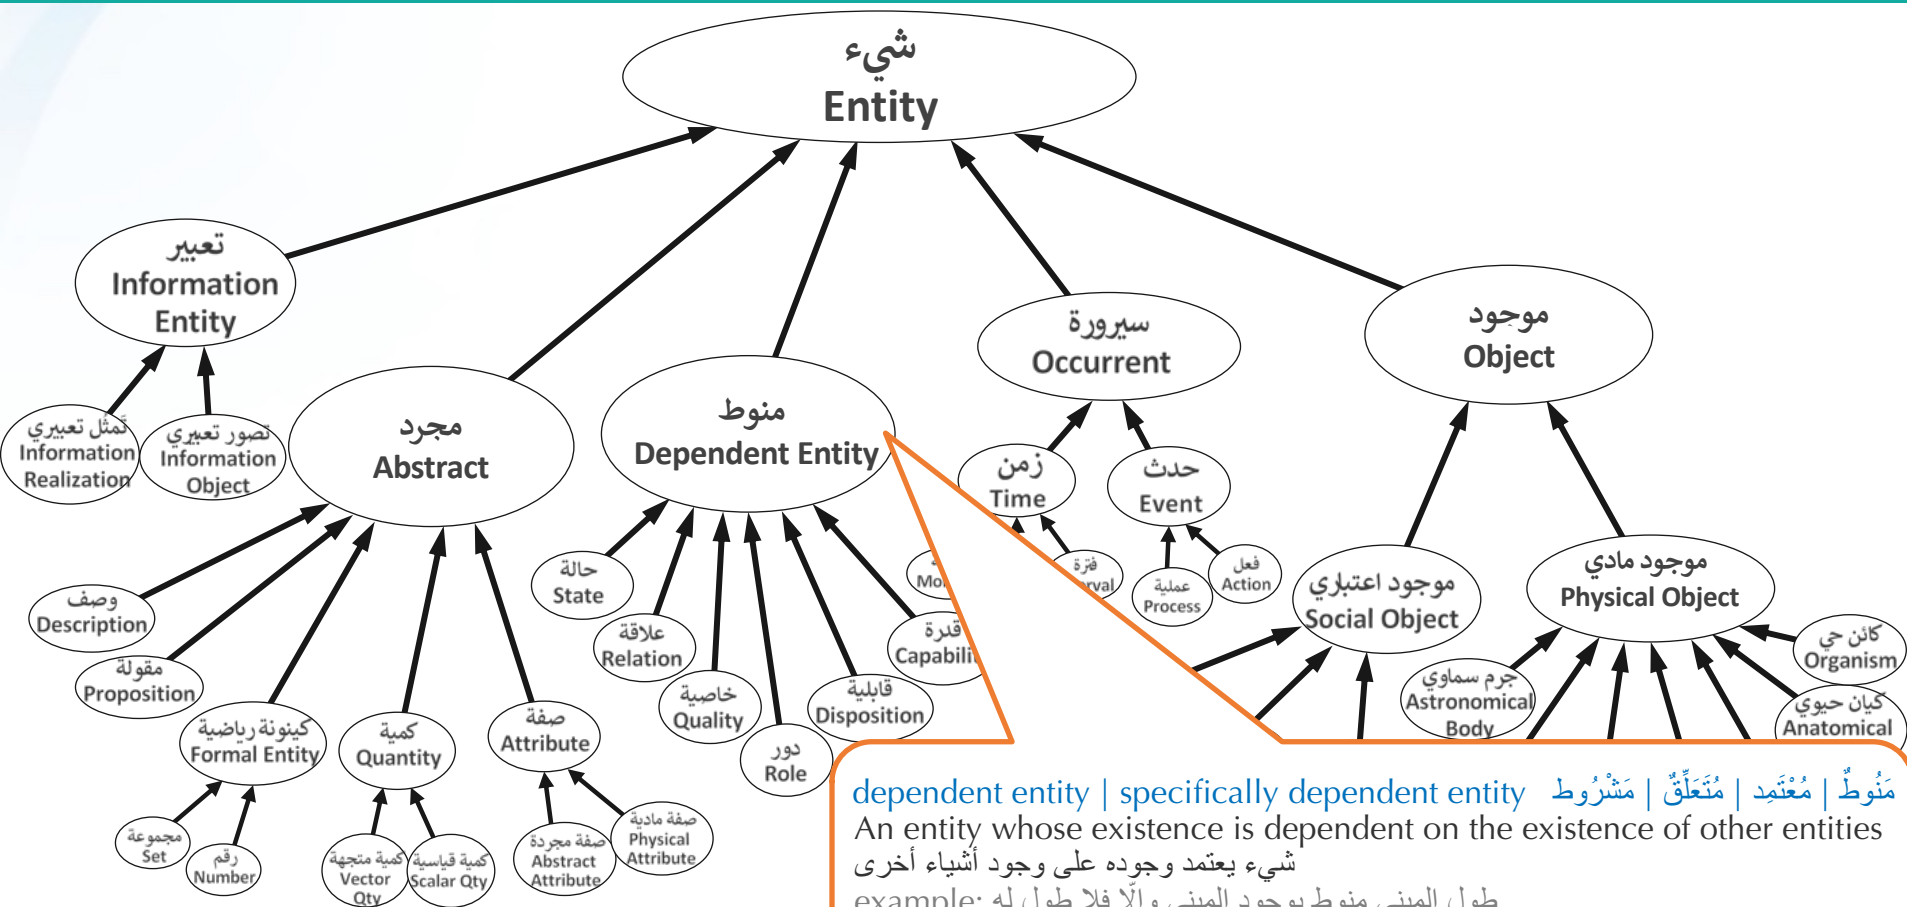

لا يمكن فهم أي حدوث بشكل منفصل عن الإطار الزمني له

293202

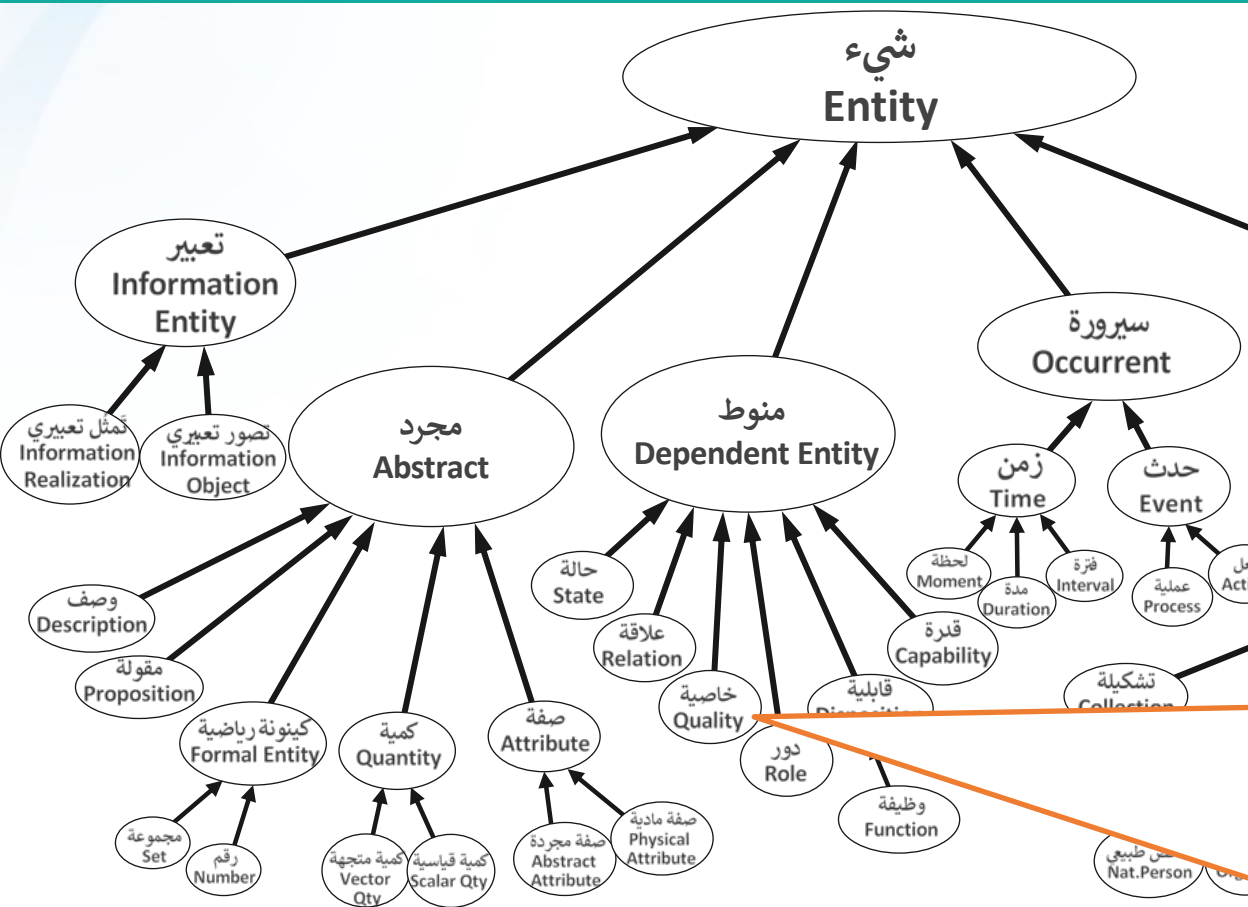

TypeOf : {entity}

# Top Levels of the Arabic Ontology

**منوط | مُعْتَمِد | مُتَعَلِّق | مَشْرُوط** | dependent entity | specifically dependent entity  
 An entity whose existence is dependent on the existence of other entities  
 شيء يعتمد وجوده على وجود أشياء أخرى  
 example: طول المبنى منوط بوجود المبنى وإلا فلا طول له  
 293201  TypeOf : {entity}

# Top Levels of the Arabic Ontology

**خاصية | صفة | مميزة | مميزة | سمة quality**  
 A dependent entity that inheres in other entities to describe, distinct and express them  
 منوط يلازم كينونات أخرى ليحدد صفاتها، ويميزها عن غيرها  
 لكل مادة خاصية تكسيها صفات محددة في بنيتها وتفاعلاتها  
 example: 293221 TypeOf: (dependent entity)

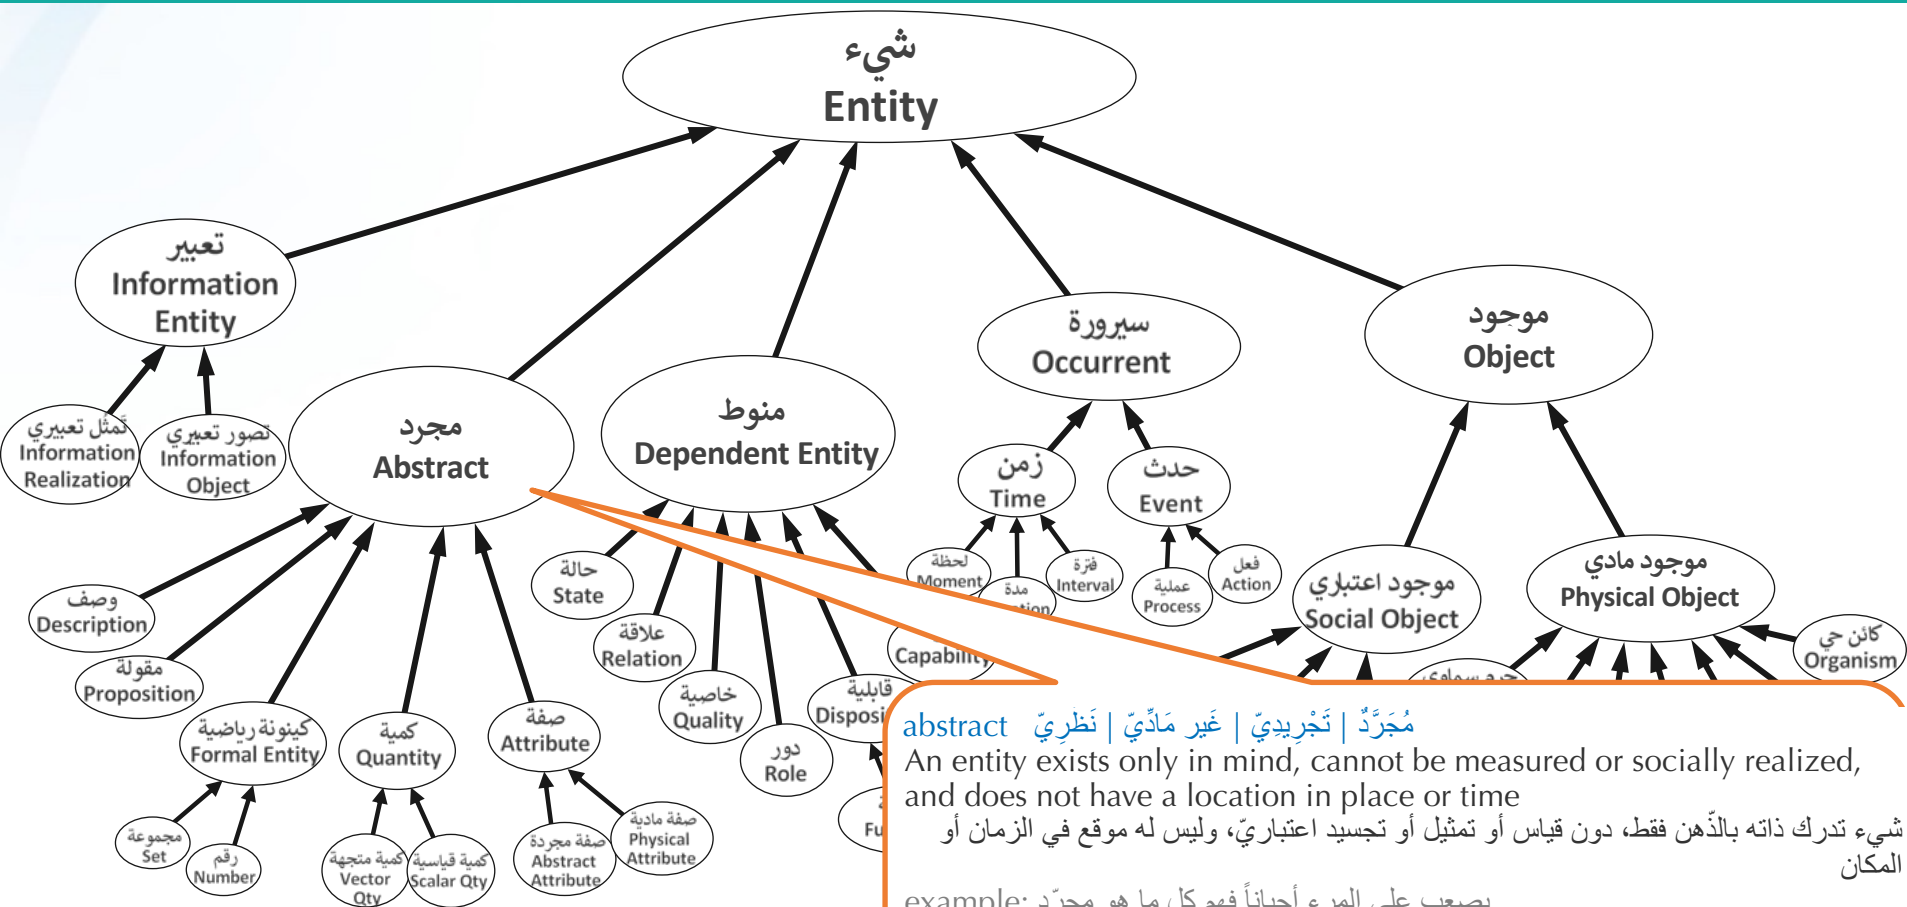

**خاصية مادية Physical Quality**  
 A quality that inheres in physical objects to describe their measurable or sensed aspects (characteristics)  
 خاصية تلازم موجودات مادية لتصف جوانبها المقاسة أو المحسوسة  
 الضوء له خاصية مادية أيضا تجعله يتأثر بفعل النقلة  
 example: 293227 TypeOf: (quality)

**خاصية مجردة | خاصية اعتبارية Abstract Quality**  
 A quality that inheres in objects to give them abstract properties that are subject to personal perspective  
 خاصية تلازم الموجودات لإعطائها صفات مجردة خاضعة للحكم من منظور شخصي  
 الجمال هو خاصية مجردة للإنسان تختلف قيمته من شخص لآخر  
 example: 293228 TypeOf: (quality)

**خاصية زمنية temporal quality**  
 A quality that inheres in occurrences to describe its temporal characteristics  
 خاصية تلازم الأحداث لوصف البعد الزمني لها  
 رحلة الأرض حول الشمس تعرف بالسنة وما يكتم هذه الفترة هو الخاصية الزمنية لذلك  
 example: 293229 TypeOf: (quality)

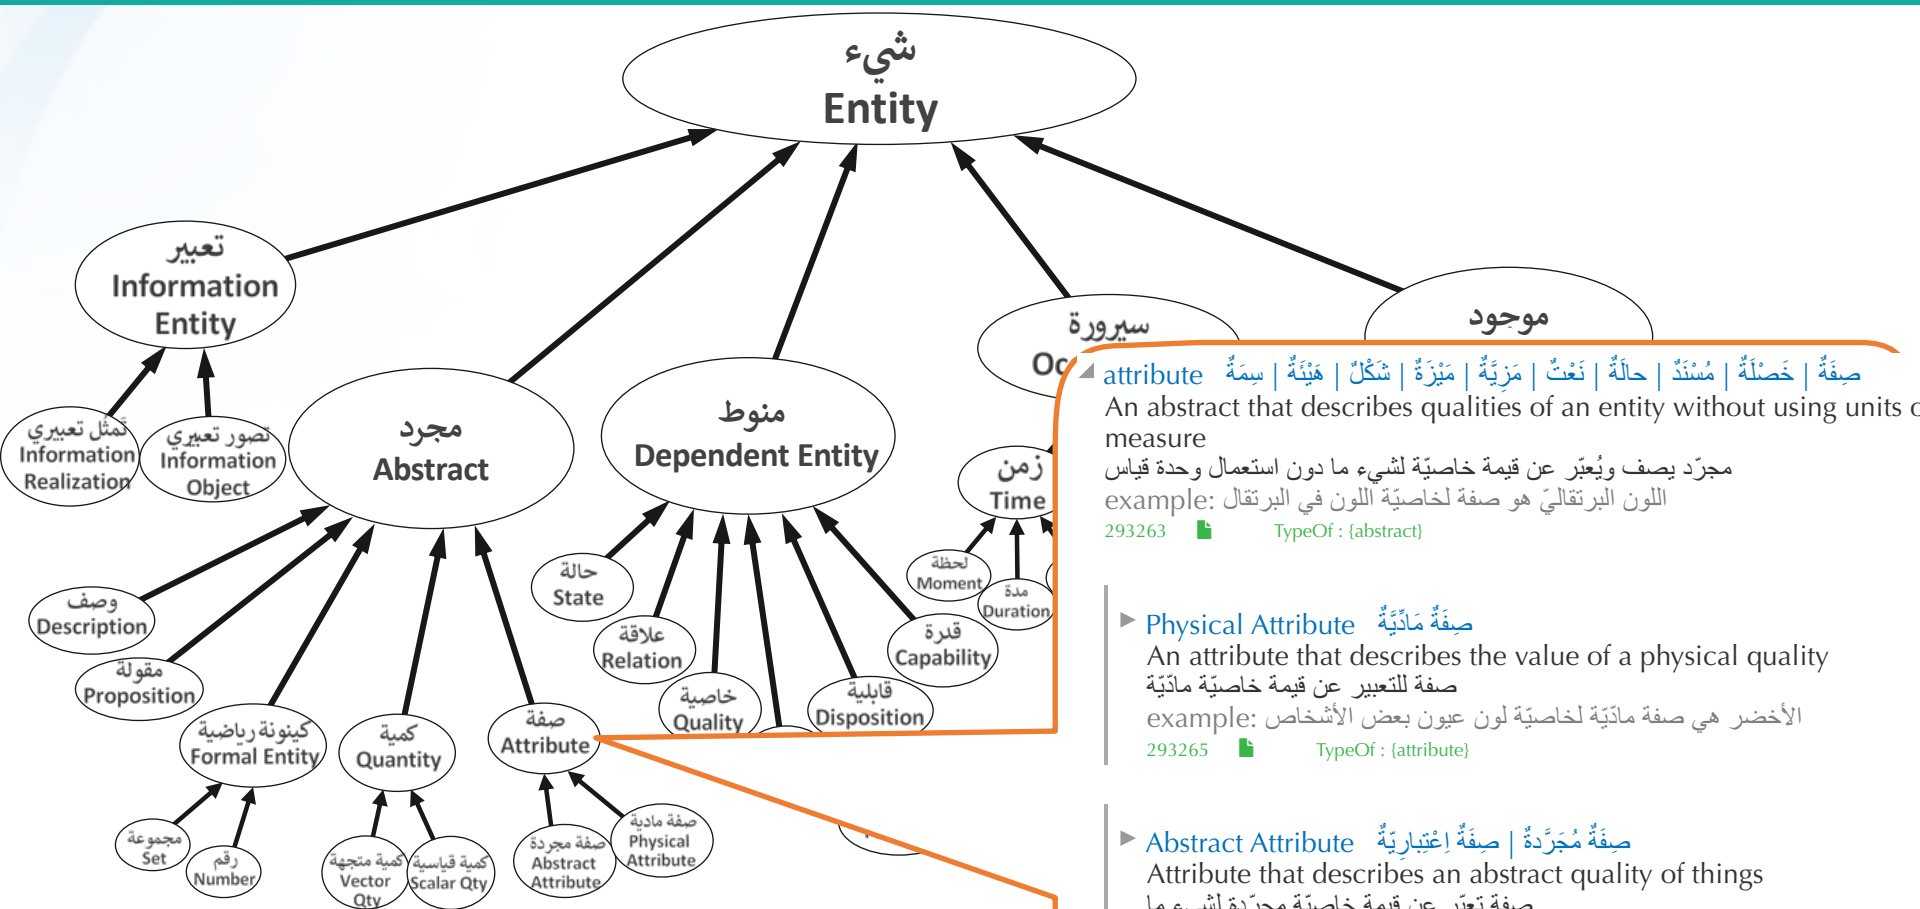

# Top Levels of the Arabic Ontology

**مَجْرَدٌ | تَجْرِيدِيٌّ | غَيْرُ مَادِّيٍّ | نَظْرِيٌّ** abstract  
 An entity exists only in mind, cannot be measured or socially realized, and does not have a location in place or time  
 شيء تدرك ذاته بالذهن فقط، دون قياس أو تمثيل أو تجسيد اعتباري، وليس له موقع في الزمان أو المكان  
 يصعب على المرء أحياناً فهم كل ما هو مجرد  
 293232  TypeOf : {entity}

# Top Levels of the Arabic Ontology

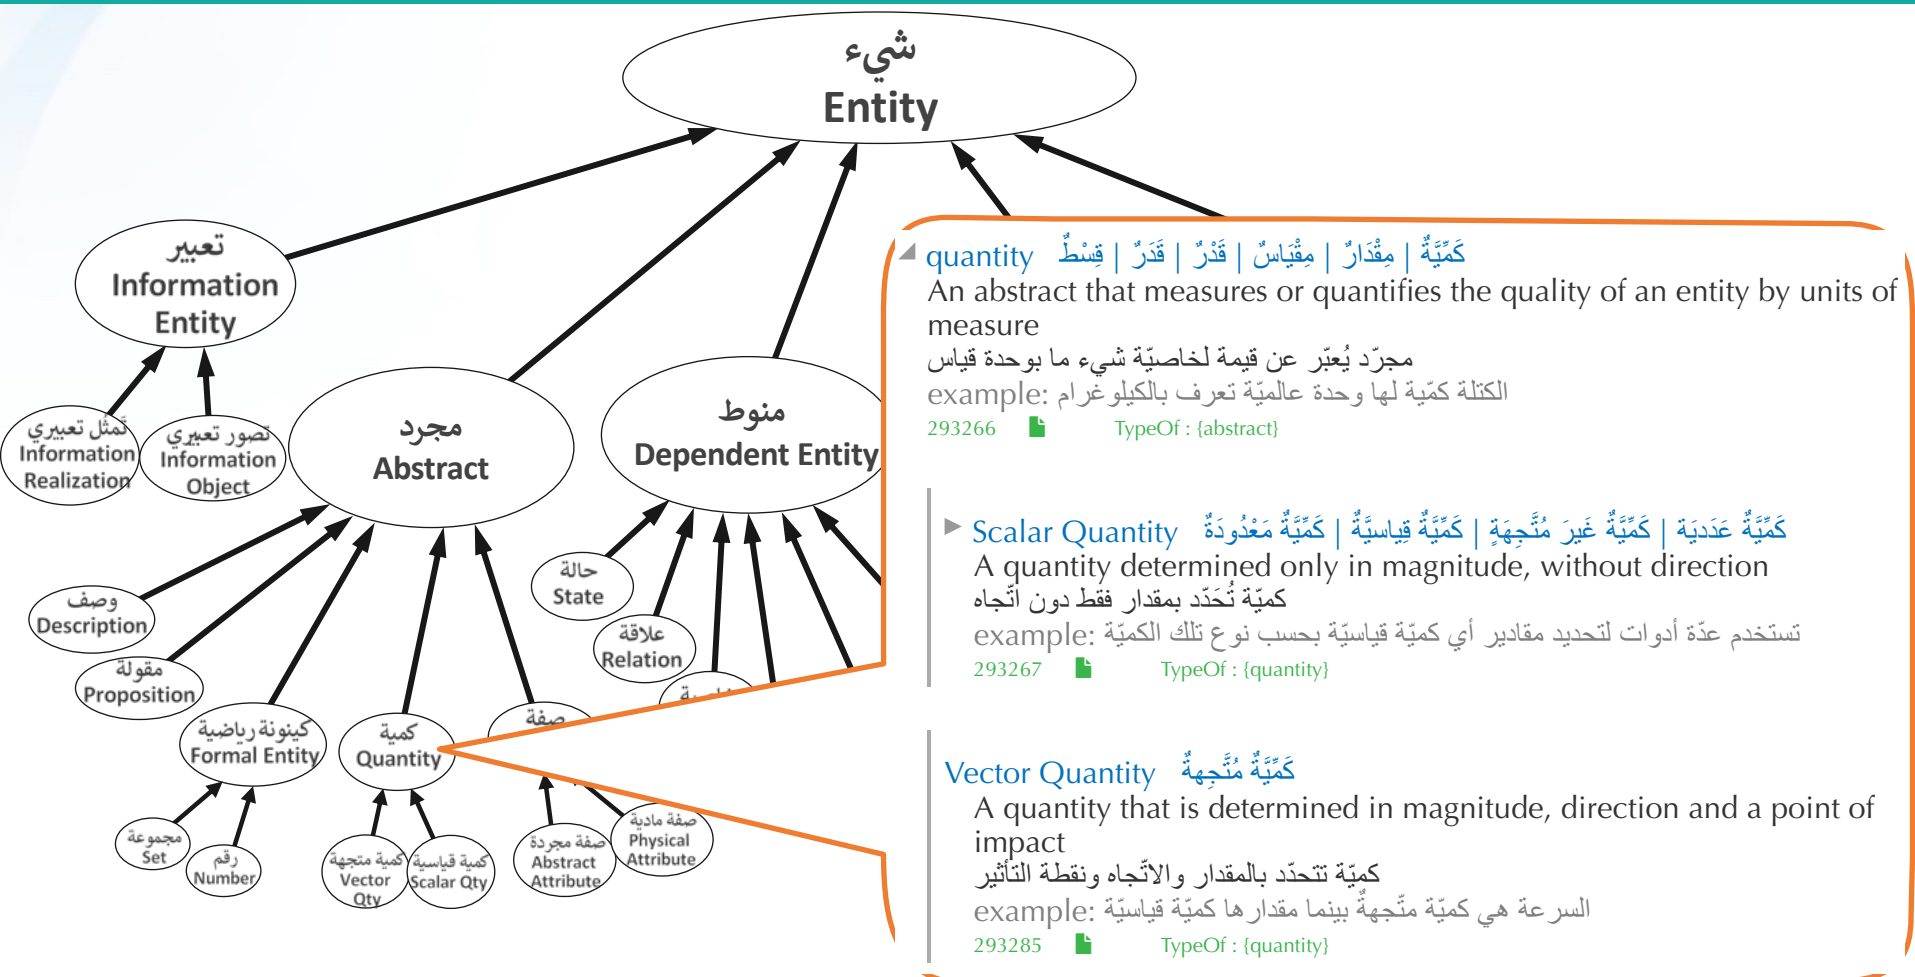

صفة | خصلة | مسند | حالة | نعت | مزية | ميزة | شكل | هيئة | سمة attribute  
 An abstract that describes qualities of an entity without using units of measure  
 مجرد يصف ويُعبّر عن قيمة خاصية لشيء ما دون استعمال وحدة قياس  
 example: اللون البرتقالي هو صفة لخاصية اللون في البرتقال  
 293263 TypeOf : {abstract}

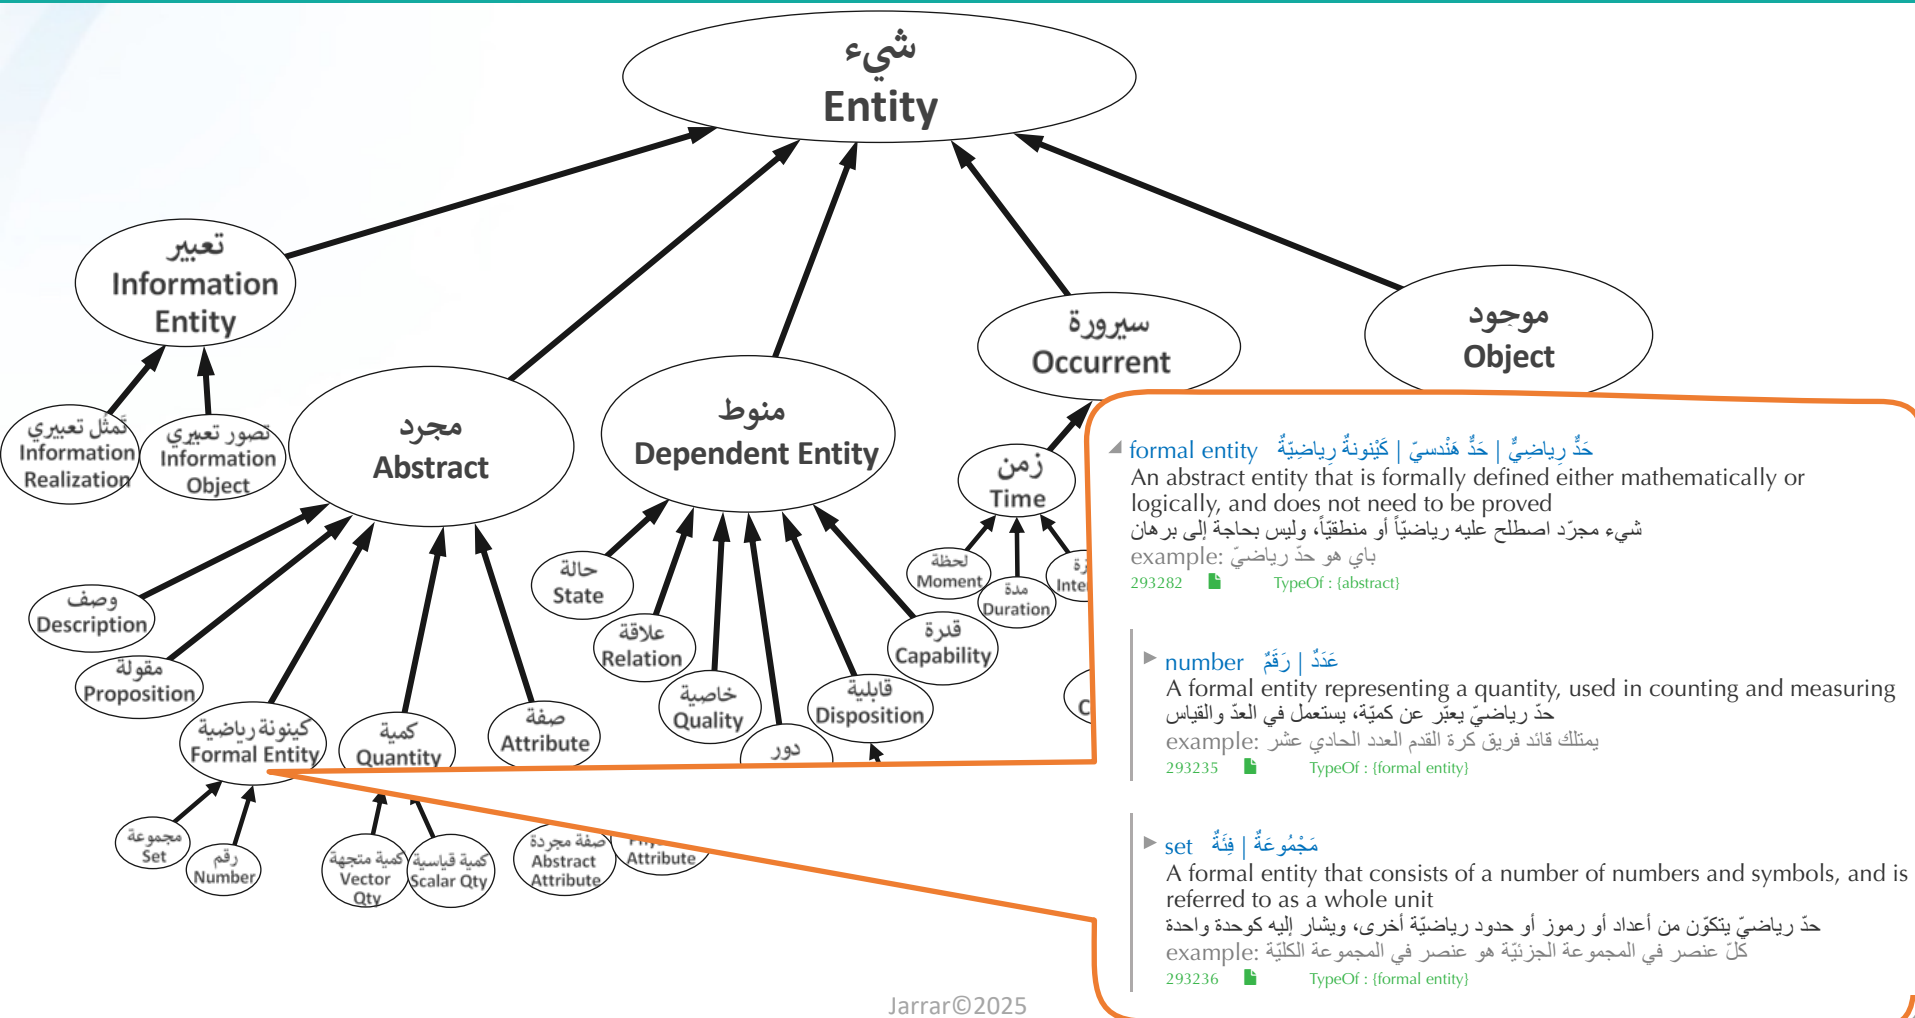

صفة مادية Physical Attribute  
 An attribute that describes the value of a physical quality  
 صفة للتعبير عن قيمة خاصية مادية  
 example: الأخضر هي صفة مادية لخاصية لون عيون بعض الأشخاص  
 293265 TypeOf : {attribute}

صفة مجردة | صفة إعتبارية Abstract Attribute  
 Attribute that describes an abstract quality of things  
 صفة تعبر عن قيمة خاصية مجردة لشيء ما  
 example: كريم هي صفة مجردة لخاصية العطاء عند الإنسان  
 293264 TypeOf : {attribute}

# Top Levels of the Arabic Ontology

# Top Levels of the Arabic Ontology

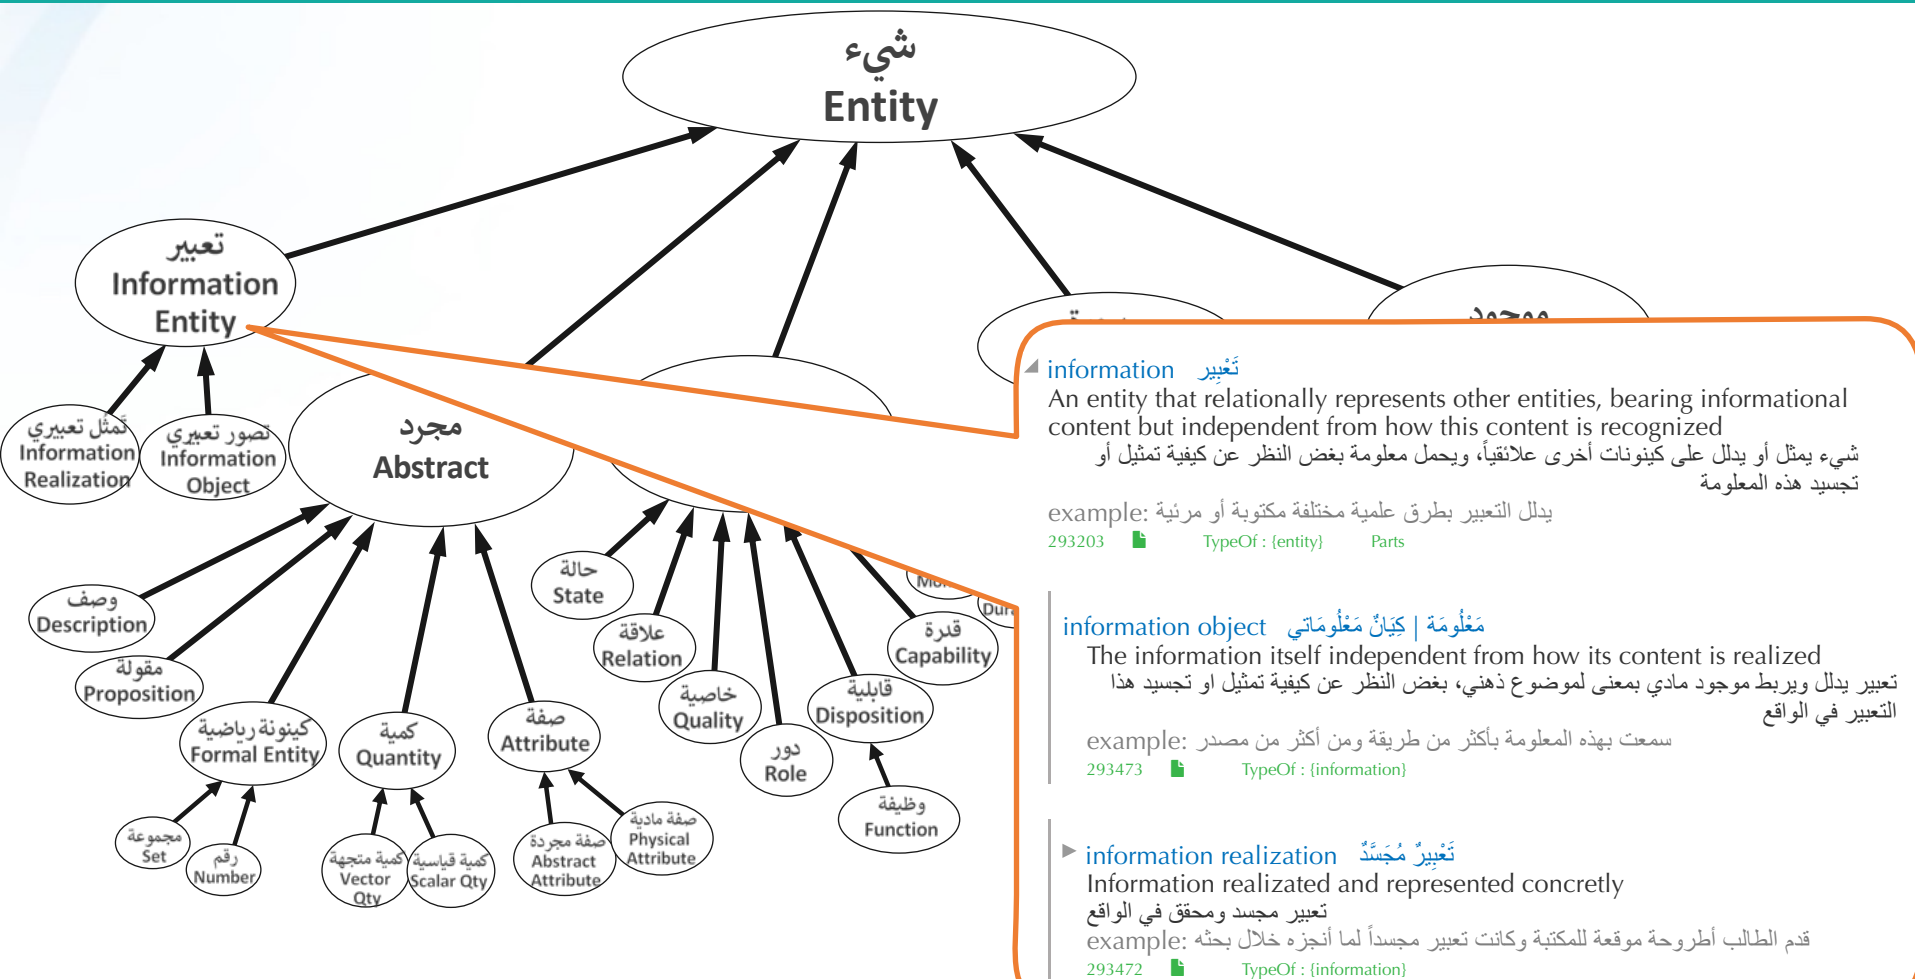

◀ **formal entity** عَدَدٌ رِیَاضِيٌّ | كَيْنُونَةٌ رِیَاضِيَّةٌ  
 An abstract entity that is formally defined either mathematically or logically, and does not need to be proved  
 شيء مجرد اصطلاح عليه رياضياً أو منطقياً، وليس بحاجة إلى برهان  
 example: باي هو حد رياضي: 293282 `TypeDef: {abstract}`

▶ **number** عَدَدٌ | رَقْمٌ  
 A formal entity representing a quantity, used in counting and measuring  
 حد رياضي يعبر عن كمية، يستعمل في العد والقياس  
 example: يمتلك قائد فريق كرة القدم العدد الحادي عشر: 293235 `TypeDef: {formal entity}`

▶ **set** مَجْمُوعَةٌ | فِئَةٌ  
 A formal entity that consists of a number of numbers and symbols, and is referred to as a whole unit  
 حد رياضي يتكون من أعداد أو رموز أو حدود رياضية أخرى، ويشار إليه كوحدة واحدة  
 كل عنصر في المجموعة الجزئية هو عنصر في المجموعة الكلية: 293236 `TypeDef: {formal entity}`

# Top Levels of the Arabic Ontology

**information** **تعبير**  
 An entity that relationally represents other entities, bearing informational content but independent from how this content is recognized  
 شيء يمثل أو يدل على كينونات أخرى علائقياً، ويحمل معلومة بغض النظر عن كيفية تمثيل أو تجسيد هذه المعلومة

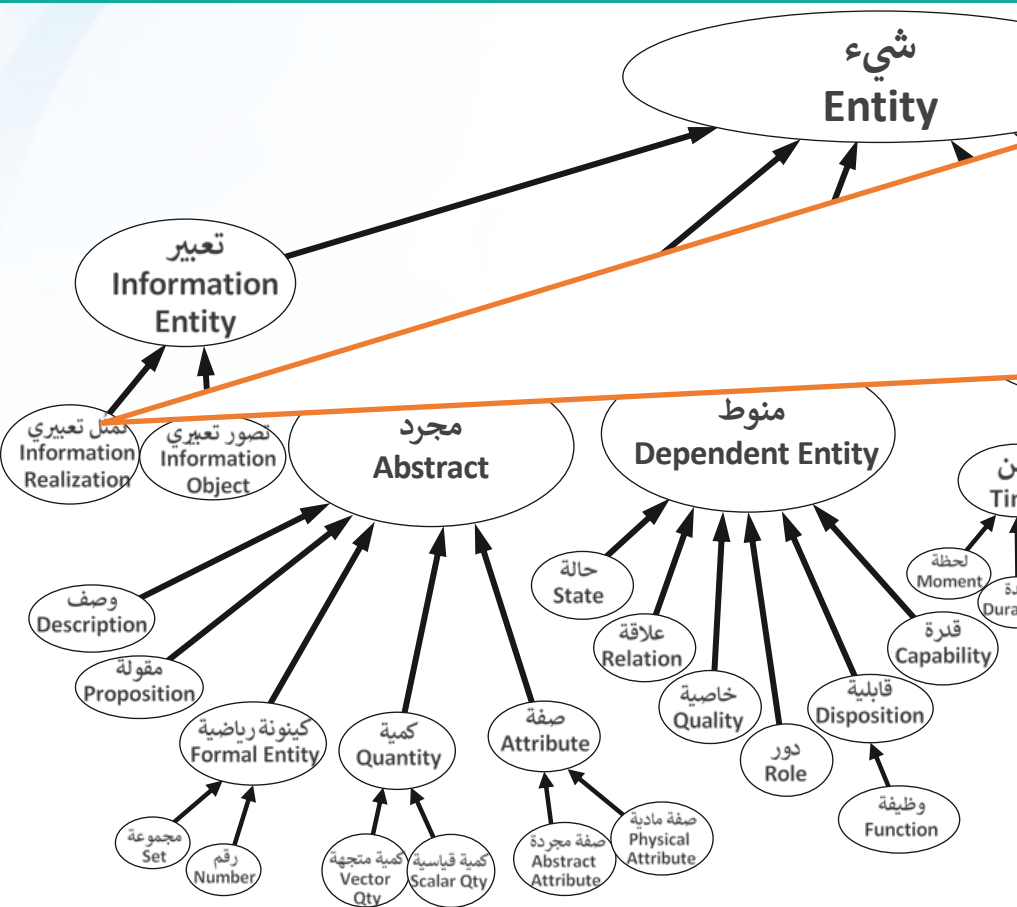

example: يدلل التعبير بطرق علمية مختلفة مكتوبة أو مرئية: 293203  
 TypeOf: {entity} Parts

**information object** **معلومة | كيانٌ معلوماتي**  
 The information itself independent from how its content is realized  
 تعبير يدلل ويربط موجود مادي بمعنى لموضوع ذهني، بغض النظر عن كيفية تمثيل أو تجسيد هذا التعبير في الواقع

example: سمعت بهذه المعلومة بأكثر من طريقة ومن أكثر من مصدر: 293473  
 TypeOf: {information}

**information realization** **تعبيرٌ مجسدٌ**  
 Information realized and represented concretely  
 تعبير مجسد ومحقق في الواقع  
 example: قدم الطالب أطروحة موقعة للمكتبة وكانت تعبير مجسداً لما أنجزه خلال بحثه: 293472  
 TypeOf: {information}

# Top Levels of the Arabic Ontology

**information realization** | **تَعْبِيرٌ مُجَسَّدٌ**  
 Information realized and represented concretly  
 تعبير مجسد ومحقق في الواقع  
 example: قدم الطالب أطروحة موقعة لمكتبة وكانت تعبير مجسداً لما أنجزه خلال بحثه: 293472  
 TypeOf: {information}

**data item | data** | **بيانات**  
 a data item is an information content entity that is intended to be a truthful statement about something (modulo, e.g., measurement precision or other systematic errors) and is con See More..  
 200000023  
 TypeOf: {information realization}

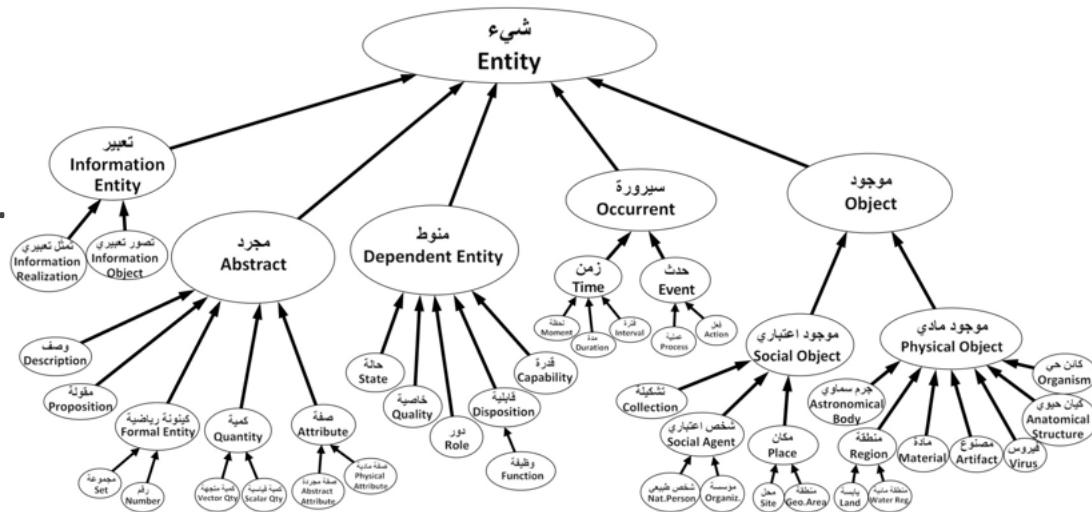

**centrally registered identifier | CRID** | **معرف المسجل الرئيسي**  
 An information content entity that consists of a CRID symbol and additional information about the CRID registry to which it belongs.[IAO]  
 200000025  
 TypeOf: {information realization}

**datum label** | **عنوان**  
 A label is a symbol that is part of some other datum and is used to either partially define the denotation of that datum or to provide a means for identifying the datum as a member See More..  
 200000027  
 TypeOf: {information realization}

**word | word form** | **كَلِمَةٌ | كَلِمَةٌ**  
 تعبير كتابي للإشارة أو الدلالة على معنى  
 200000034  
 TypeOf: {information realization}

# Comprehensiveness Evaluation

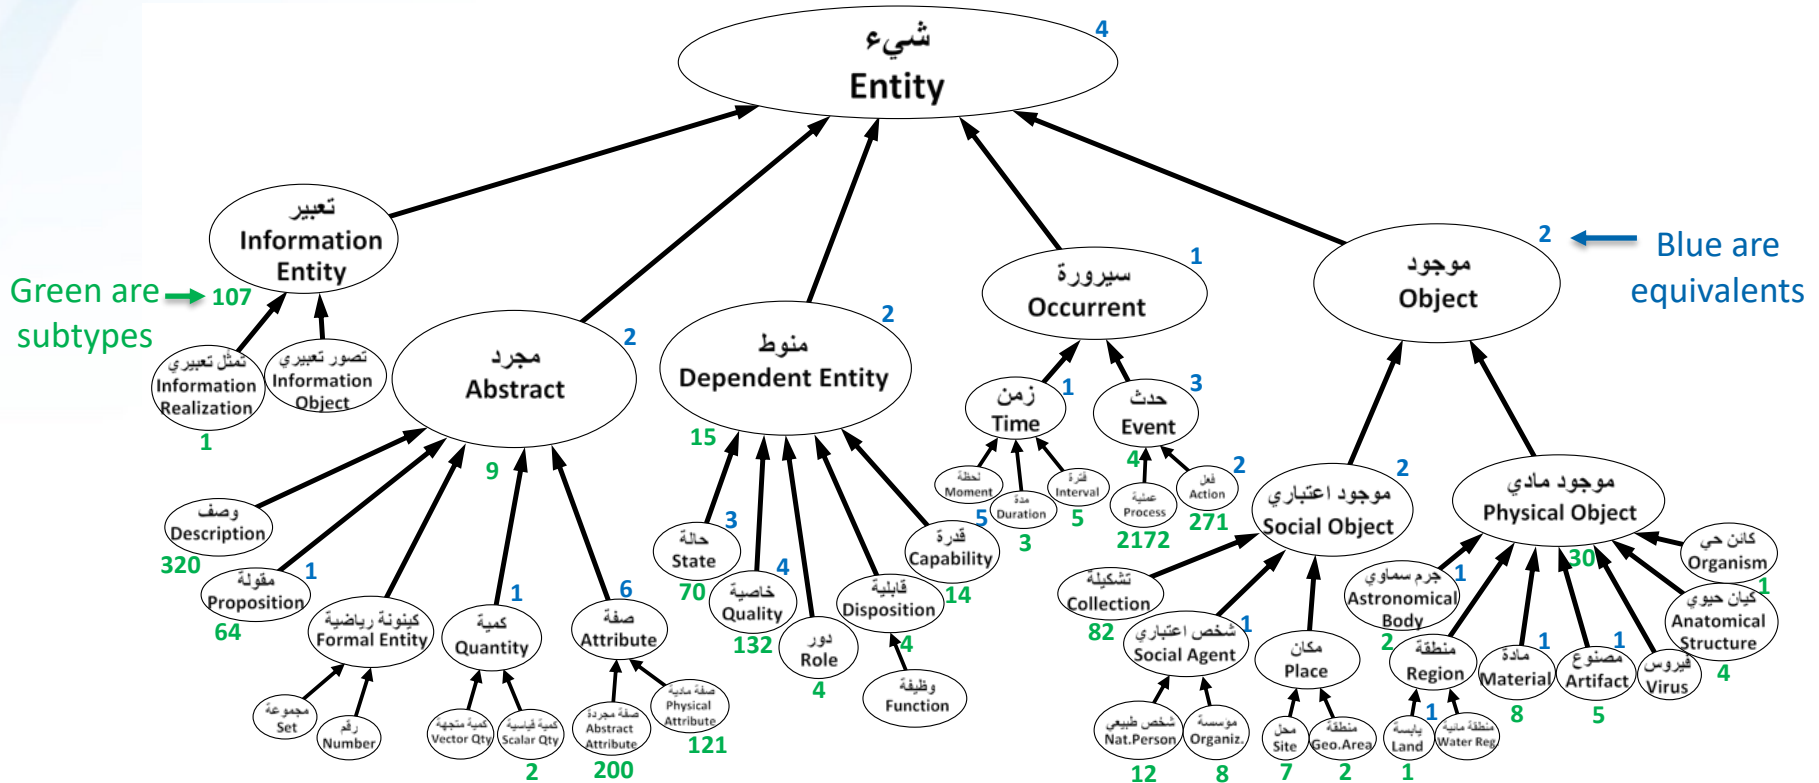

How much is the current version of the ontology is able to *top* (i.e. be a supertype of) the concepts of the Arabic terms?

**Experiment:** classify the 1830 terms found in Al-Jurjānī “Ta‘rīfāt” lexicon (1339–1414 AD) under the ontology. This lexicon contains the most abstract notions in Arabic in most domains. 270 concepts are excluded (not understand, can be instantiated , etc).

**Ideally:** each of the 1830 concepts should be placed either as “equivalent to” a node in the ontology, or as a “subtype of” a leaf node.

# Comprehensiveness Results

- 1655 (90%) concepts that are correctly placed in the ontology.
- 156 (10%) concepts that are mapped as subclasses of non-leaf nodes illustrate cases of missing top categories in the ontology (we are working on adding them).

# Gloss Formulation Methodology

Gloss: a short informal definition.

The purpose of a gloss is to state **the critical and distinguishing characteristics** that all instances of a concept have in common, in an informal but controlled way.

## Gloss Formulation Guidelines:

Step 1: Start with the supertype of the concept being defined. e.g., “Object: An entity that...”, “Physical Object: An object that ...”.

يبدأ التعريف بالجنس الأعلى للمفهوم المراد تعريفه.

entity | كَائِنٌ | كَيْنُونَةٌ | شَيْءٌ | كَيْنٌ  
أَيُّمَا وُجِدَ أَوْ سَيُوجَدُ وَنَسْتَطِيعُ إِدْرَاكَهُ أَوْ تَخَيُّلَهُ

مثال: كل شيء على ما يرام

Whatever existed or will exist, and can be realized or imagined  
293198

object | مَوْجُودٌ | كَائِنٌ | قَائِمٌ | حَقِيقِيٌّ | وَاقِيعِيٌّ | شَيْءٌ |  
independent continuant  
ذَاتٌ | قَائِمَةٌ

شيء له ذات مستقلة بنفسه، وحاضر كلياً في الزمن، ويُدرك بذاته قياساً أو لذاته اعتباراً  
مثال: يختلف إدراكنا لأي موجود لاختلاف ما يميز أنواعه من الصفات الجوهرية  
An entity that is wholly and independently present in time, and is realized either for its concrete or social existence  
النوع : (شيء) 293200

physical object | مَوْجُودٌ مَادِّيٌّ | مَحْسُوسٌ | مَلْمُوسٌ | كَائِنٌ |  
material entity  
حَقِيقِيٌّ | مُجَسَّدٌ

موجود يشغل حيزاً مكانياً، ويدرك بذاته بالحواس أو بأدوات القياس  
مثال: لكل موجود مادي حجم يمكن قياسه أو حسابه مهما صغر أو كبر  
An object that occupies space, and is realized by senses or measuring tools  
النوع : (موجود) أجزاء 293254

organism | كَائِنٌ حَيٌّ | مُتَعَصِّصٌ

موجود مادي قائم بذاته، يُظهر صفة الحياة، يقوم بمجموعة من الأنشطة والعمليات الحيوية، وهو قادر على التنفس، النمو، التكاثر، والتغذية  
مثال: التكيف هو قدرة الكائن الحي على الاستجابة للمؤثرات الطارئة بهدف البقاء  
Physical object that can act independently constituted to carry on the activities of life by means of organs separate in function but mutually dependent; organisms have the ability to breathe, grow, feed, and reproduce.  
النوع : (موجود مادي) 293261

Anatomical | بِنَاءٌ حَيَوِيٌّ | كَيَانٌ حَيَوِيٌّ | بِنَاءٌ تَشْرِيحِيٌّ | تَرْكِيْبٌ حَيَوِيٌّ |  
Structure  
تَرْكِيْبٌ تَشْرِيحِيٌّ

موجود مادي ثلاثي الأبعاد يدخل في تركيب الكائن الحي، مكوناته ناتجة عن الترجمة البنائية المنظمة لجينوم الكائن الحي  
مثال: نسخ الجينوم هي المرحلة الأولى لتكوين بناء حيوي مستنسخ

# Gloss Formulation Methodology

Gloss: a short informal definition.

The purpose of a gloss is to state **the critical and distinguishing** characteristics that all instances of a concept have in common, in an informal but **controlled way**.

## Gloss Formulation Guidelines:

Step 2: List only the most distinguishing and intrinsic characteristics that **specialize** the concept from its supertype, and that **differentiate** it from other concepts in the same level.

اذكر فقط الخصائص الجوهرية المميزة التي تخصص المفهوم عن نوعه الأعلى، وتميزه عن المفاهيم الأخرى في نفس المستوى.

شيء | كَيْوْنَةٌ | كَائِنٌ | entity  
أَيُّمَا وُجِدَ أَوْ سَيُوجَدُ وَنَسْتَطِيعُ إِدْرَاكَهُ أَوْ تَخَيُّلَهُ

مثال: كل شيء على ما يرام

Whatever existed or will exist, and can be realized or imagined  
293198

مُؤْجِدٌ | كَائِنٌ | قَائِمٌ | حَقِيقِيٌّ | وَاقِيعِيٌّ | شَيْءٌ |  
object | independent continuant  
ذات | قَيُّومٌ

شيء له ذات مستقلة بنفسه، وحاضر كلياً في الزمن، ويُدرك بذاته قياساً أو لذاته اعتباراً  
مثال: يختلف إدراكنا لأي موجود لاختلاف ما يميز أنواعه من الصفات الجوهرية  
An entity that is wholly and independently present in time, and is realized either for its concrete or social existence  
النوع : (شيء) 293200

مَوْجُودٌ مَادِّيٌّ | مَحْسُوسٌ | مَلْمُوسٌ | كَائِنٌ |  
physical object | material entity  
حَقِيقِيٌّ | مُجَسَّدٌ

موجود يشغل حيزاً مكانياً، ويدرك بذاته بالحواس أو بأدوات القياس  
مثال: لكل موجود مادي حجم يمكن قياسه أو حسابه مهما صغر أو كبر  
An object that occupies space, and is realized by senses or measuring tools  
النوع : (مؤجود) أجزاء 293254

كَائِنٌ حَيٌّ | مُتَعَصِّفٌ |  
organism

موجود مادي قائم بذاته، يُظهر صفة الحياة، يقوم بمجموعة من الأنشطة والعمليات الحيوية، وهو قادر على التنفس، النمو، التكاثر، والتغذية  
مثال: التكيف هو قدرة الكائن الحي على الاستجابة للمؤثرات الطارئة بهدف البقاء  
Physical object that can act independently constituted to carry on the activities of life by means of organs separate in function but mutually dependent; organisms have the ability to breathe, grow, feed, and reproduce.  
النوع : (مؤجود مادي) 293261

بِنَاءٌ حَيَوِيٌّ | كَيَانٌ حَيَوِيٌّ | بِنَاءٌ تَشْرِيحِيٌّ | تَرْكِيبٌ حَيَوِيٌّ |  
Anatomical | Structure  
تَرْكِيبٌ تَشْرِيحِيٌّ

موجود مادي ثلاثي الأبعاد يدخل في تركيب الكائن الحي، مكوناته ناتجة عن الترجمة البنائية المنظمة لجينوم الكائن الحي  
مثال: نسخ الجينوم هي المرحلة الأولى لتكوين بناء حيوي مستنسخ

# Gloss Formulation Methodology

Gloss: a short informal definition.

The purpose of a gloss is to state **the critical and distinguishing characteristics** that all instances of a concept have in common, in an informal but controlled way.

## Gloss Formulation Guidelines:

Step 3: Write the distinguishing characteristics in the form of a sequence of propositions to help the reader to easily mentally rebuild the concept being defined in a declarative and non-narrative manner.

صياغة الخصائص المميزة على شكل مجموعة من القضايا  
لاستنباط المعنى، تسهيل إعادة بناء المفهوم ذهنياً بطريقة  
تقريرية وغير سردية

شيء | كَيْفِيَّةٌ | كَائِنٌ | entity  
أَيُّمَا وُجِدَ أَوْ سَيُوجَدُ وَنَسْتَطِيعُ إِدْرَاكَهُ أَوْ تَخْيَلَهُ

مثال: كل شيء على ما يرام

Whatever existed or will exist, and can be realized or imagined  
293198

مُؤْجَدٌ | كَائِنٌ | قَائِمٌ | حَقِيقِيٌّ | وَاقِيعِيٌّ | شَيْءٌ |  
object | independent continuant  
ذات | قَيُومٌ

شيء له ذات مستقلة بنفسه، وحاضر كلياً في الزمن، ويُدرك بذاته قياساً أو لذاته اعتباراً  
مثال: يختلف إدراكنا لأي موجود لاختلاف ما يميز أنواعه من الصفات الجوهرية  
An entity that is wholly and independently present in time, and is realized either for its concrete or social existence  
النوع : (شيء) 293200

مَوْجُودٌ مَادِّيٌّ | مَحْسُوسٌ | مَلْمُوسٌ | كَائِنٌ |  
physical object | material entity  
حَقِيقِيٌّ | مُجَسَّدٌ

موجود يشغل حيزاً مكانياً، ويدرك بذاته بالحواس أو بأدوات القياس  
مثال: لكل موجود مادي حجم يمكن قياسه أو حسابه مهما صغر أو كبر  
An object that occupies space, and is realized by senses or measuring tools  
النوع : (موجود) أجزاء 293254

كَائِنٌ حَيٌّ | مُتَعَصِّفٌ |  
organism

موجود مادي قائم بذاته، يُظهر صفة الحياة، يقوم بمجموعة من الأنشطة والعمليات الحيوية، وهو قادر على التنفس، النمو، التكاثر، والتغذية  
مثال: التكيف هو قدرة الكائن الحي على الاستجابة للمؤثرات الطارئة بهدف البقاء  
Physical object that can act independently constituted to carry on the activities of life by means of organs separate in function but mutually dependent; organisms have the ability to breathe, grow, feed, and reproduce.  
النوع : (موجود مادي) 293261

بناء حيوي | كيان حيوي | بناء تشريحي | تركيب حيوي |  
Anatomical | Structure  
تركيب تشريحي

موجود مادي ثلاثي الأبعاد يدخل في تركيب الكائن الحي، مكوناته ناتجة عن الترجمة البنائية المنظمة لجينوم الكائن الحي  
مثال: نسخ الجينوم هي المرحلة الأولى لتكوين بناء حيوي مستنسخ

# Concept (vs Synset)

## Definition: Concept (Jarrar, 2021):

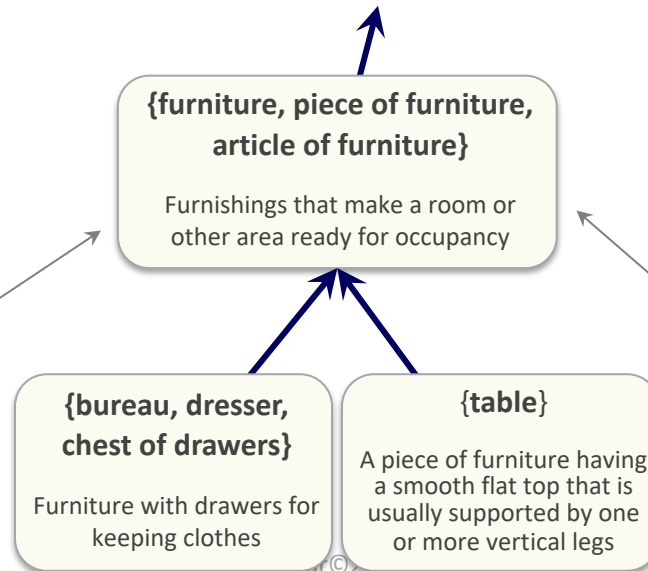

Given a concept  $c$ , its **intensional** interpretation  $c^I$  is defined on a *domain space*  $\langle D, W \rangle$  as a function  $c^I: W \rightarrow 2^D$ , where  $D$  is a domain and  $W$  is a **set of maximal states of affairs** on  $D$ . For a concept  $c$ , the set  $E_c = \{c^I(w) \mid w \in W\}$  is the set of the admissible extensions of  $c$ . Two concepts having the same set of *admissible* instances, in all states of affairs, are considered the same concept.

## Wordnet

made of synsets  
(linguistic concepts)

**Synset:** signifies a concept;  
a thought in our mind.

Individuals are also linguistic  
concepts (ISO 1087-1:2000)

## Arabic Ontology

made of concepts  
(classes of individuals).

**Concept:** class of individuals;  
characteristics its instances  
have in common.

In BFO, Universal/Defined Class.

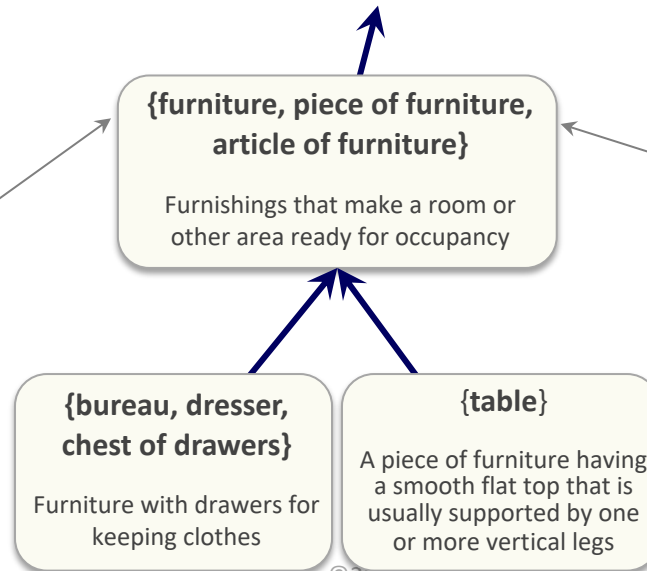

# Synonymy Relation

## Definition: Synonymy Relation (Jarrar, 2021)

Given two terms  $t_1$  and  $t_2$  lexicalizing concepts  $c_1$  and  $c_2$ , respectively, then  $t_1$  and  $t_2$  are considered to be synonymous *iff*  $c_1 = c_2$ . In this way, synonymy can be defined as an **equivalence relation  $=_c$  between terms** lexicalizing the same concept, thus it is a **reflexive, symmetric and transitive** relation.

## Wordnet

**Synonyms:** “two expressions are synonymous in a linguistic context C if the substitution of one for the other in C does not alter the truth value” (Miller et al., 1990).

## Arabic Ontology

**Synonyms:** alternative labels/names of concepts.

Linking the semantic with the morphology levels

# Subsumption Relation

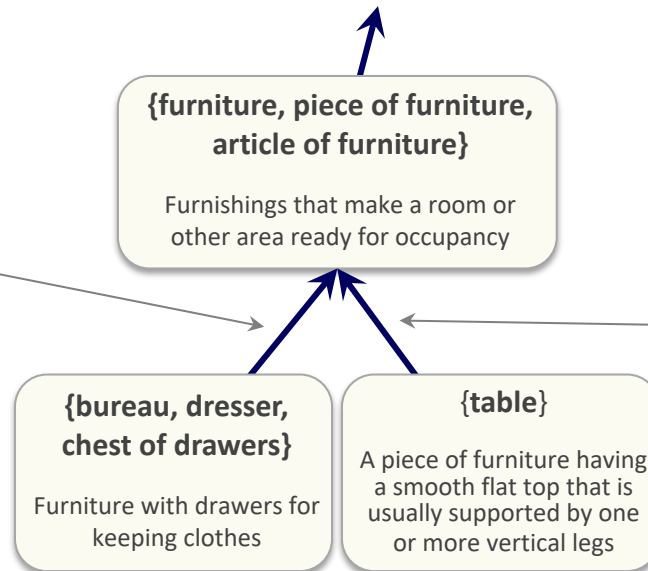

## Definition: Subsumption (Jarrar, 2021):

Concept  $c_1$  subsumes concept  $c_2$ , *iff* every instance of  $c_2$  is an instance of  $c_1$ , in every possible state of affairs.

### Wordnet

### Arabic Ontology

**Hyponymy:** If native speakers accept a sentence like: B is a kind of A

**Subsumption:** a subset relation between concepts. Every instance in  $c_1$  is also an instance in  $c_2$ .

# Parthood Relation

The parthood relationship is not fully formalized in the current version of the Arabic Ontology. Our progress in formalizing related relationships (e.g., **occurrent-part-of**, **temporalpart-of**, **isotypic-part-of**, **homeomeric-in**, **cumulative-with**, and **is-telic-in**) can be found in a previous work ([Jarrar & Ceusters, 2017](#)).

## *p* **occurrent-part-of** *q*

a primitive relation of parthood holding independently of time between two process instances when one is a subprocess of the other (Arp et al 2015:135).

## *p* **temporal-part-of** *q* =def.

*p* **occurrent-part-of** *q*

& for some temporal region *r* *p* spans *r*

& for all occurrents *c*, *r'*

if (*c* spans *r'* & *r'* **occurrent-part-of** *r*

then (*c* **occurrent-part-of** *p* iff *c* **occurrent-part-of** *q*))

(Smith 2012, corrected).

## *p* **is-telic-in** *R* =def.

*p* **instance-of** *P*

& there exists some process *q* **instance-of** *Q* and some process *r* **instance-of** *R*, such that

- (1) *q* not **instance-of** *P*,
- (2) *p* not **instance-of** *Q*,
- (3) *p* **precedes** *q*, and
- (4) *p* and *q* are **temporal-part-of** *r*.

## *p* **isotypic-part-of** *q* =def.

*p* **temporal-part-of** *q*

& *p* **instance-of** all types instantiated by *q*.

## *p* **weakly-homeomeric-in** *P* =def.

all temporal parts of *p* which are not process boundaries are instances of *P*.

## *p* **strongly-homeomeric-in** *P* =def.

all temporal parts of *p* which are not process boundaries are instances of *P* and there is no such part of *p* that instantiates a subtype of *P*

## *p* **cumulative-with** *q* =def.

all process types instantiated by *p* and all process types instantiated by *q* are instantiated by *p*, *q* and *p+q*.

## Natural Language Processing

# The Arabic Ontology

In this lecture:

- Part 1: Need for Linguistic Ontologies
- Part 2: General Overview
- Part 3: Upper-level Concepts
- Part 4: Gloss Formulation Guidelines
- Part 5: Fundamentals and Formal Definitions
- Part 6: **Benchmarking Ontology Content**
- Part 7: Discussion
- Part 8: Practice

# Benchmarking the ontology content

- What should the ontology capture and adhere to?
- On what basis the correctness of the ontology content can be benchmarked?

- Should concepts be defined/classified based on what Arabic speakers commonly believe!
- Should we adopt a certain lexicon and formalize it!
- Should we rely on what the scientific literature accepts!
- Should we build the ontology based on what we, the ontology builders, believe!

مُوجُودٌ مَادِّيٌّ | مَحْسُوسٌ | مَلْمُوسٌ | كَائِنٌ | حَقِيقِيٌّ | physical object | material entity

An object that occupies space, and is realized by senses or measuring tools

موجود يشغل حيزاً مكانياً، ويدرك بذاته الحواس أو بأدوات القياس

example: لكل مُوجُود مَادِّي حجم يمكن قياسه أو حسابه مهما صغر أو كبر

293254 TypeOf: (object) Parts

كَائِنٌ حَيٌّ | مُتَعَصِّنٌ | organism

Physical object that can act independently constituted in function but mutually dependent; organisms have the ability [See More..](#)

موجود مادي قائم بذاته، يُظهر صفة الحياة، يقوم بمجموعة من الأنشطة والعمليات الحيوية، وهو قادر على التنفس، النمو، التكاثر، والتغذية

example: التكيف هو قدرة الكائن الحي على الاستجابة للمؤثرات الطارئة بهدف البقاء

293261 TypeOf: (physical object)

بناء حيوي | كيان حيوي | بناء تشريحي | تركيب حيوي | تركيب تشريحي

Physical object that has 3D shape and its components generated by coordinated expression of the organism's own genome

موجود مادي ثلاثي الابعاد يدخل في تركيب الكائن الحي، مكوناته ناتجة عن الترجمة البنائية المنظمة للجينوم الكائن الحي

example: نسخ الجينوم هي المرحلة الاولى لتكوين بناء حيوي مستنسخ

293268 TypeOf: (physical object)

فيروس | خَمة | virus

Physical object active only in a cell of living host, composed of nucleic acid (DNA or RNA) coated with protein envelope.

موجود مادي يمارس نشاطه الحيوي في خلية العائل فقط، سريع التكاثر ويتكون من حمض نووي محاط بغلاف بروتيني (DNA or RNA)

example: غسل اليدين جيداً بالماء والصابون من طرق الحد من انتشار الفيروس

293262 TypeOf: (physical object)

مادة | material

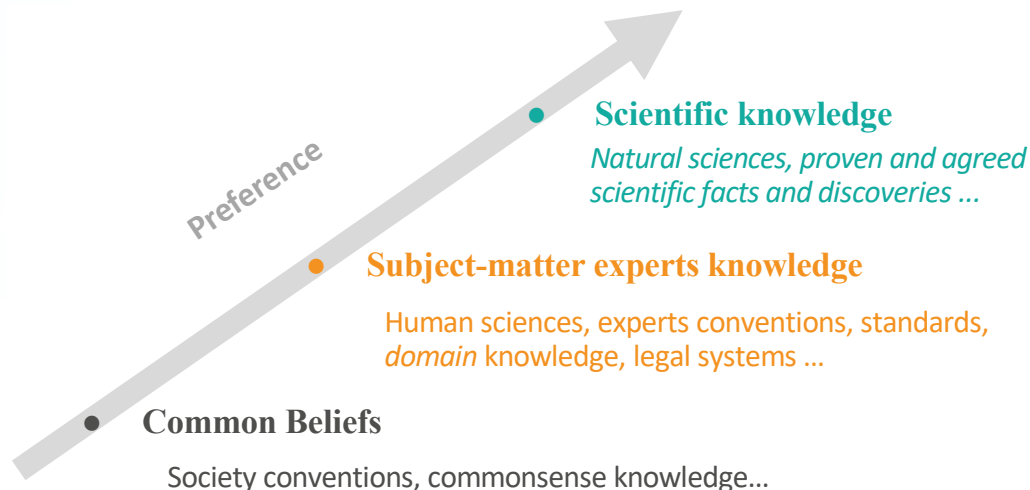

Physical object that forms basic substances that makes up other physical entities, and can be realized independently for it unique properties that distinguish it, from other physical objects

موجود مادي يشكل البنية الأساسية التي تتكون منها الموجودات المادية الأخرى، ويدرك بذاته لصفات تميزه عن الموجودات أمادية بواه

example: تدخل مادة النايلون في صناعة العديد من الملابس

293257 TypeOf: (material object)

# Benchmarking Methodology

The ontological precision of the classifications is benchmarked against the following, in order:

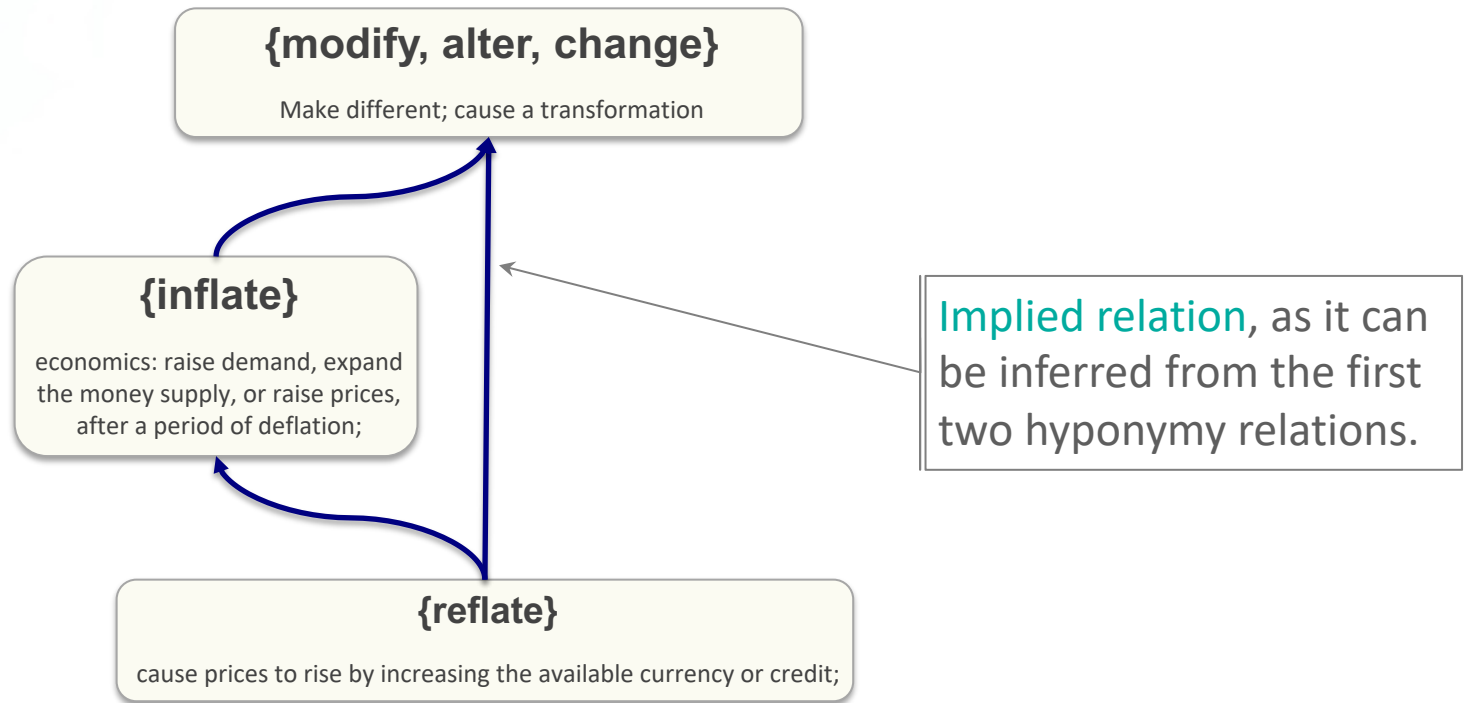

- 1. Scientific knowledge**, which scientists typically accept on the basis of experimentation and verification and commonly agree about. If no mature answer is found in the state-of-art scientific discoveries, then against,
- 2. Subject-matter experts' and domain knowledge and conventions.** If no answer can be synthesized or attained from experts' knowledge, then against,
- 3. Commonsense knowledge**, repeatedly found in quality lexicons and literature.

## **More issues in wordnet:**

Which might not be correct from a formal/ontological perspective

# Formal/Ontological issues in wordnet

No benefits for including implied relations

# Formal/Ontological issues in wordnet

Might be different linguistic concepts, but ontologically it is the same instance.

**{evening star, Hesperus, Vesper}**

a planet (usually Venus) seen at sunset in the western sky

**{Phosphorus, Lucifer, daystar, morning star}**

a planet (usually Venus) seen just before sunrise in the eastern sky

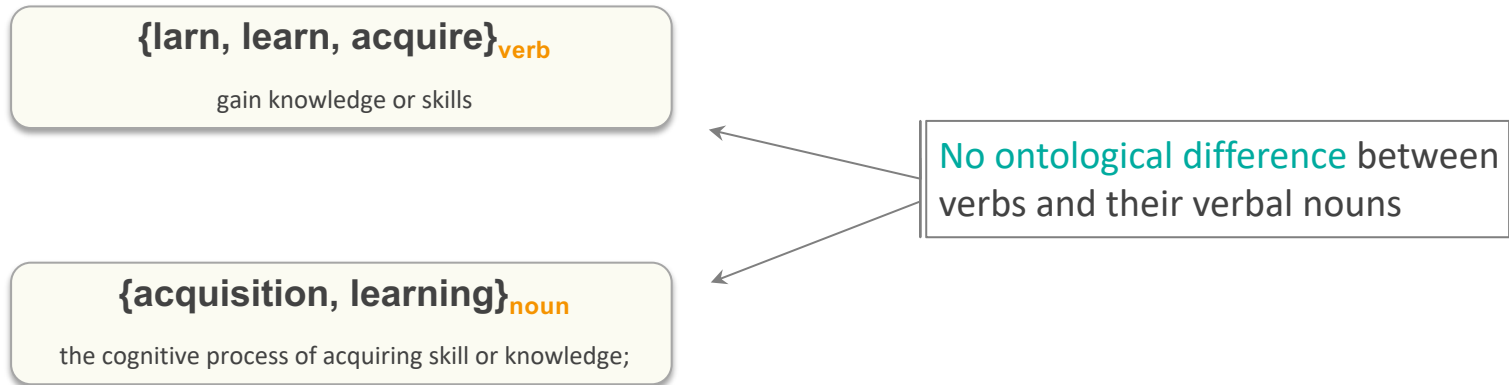

Same instance (i.e., Venus)  
that people see at different  
occasions.

# Formal/Ontological issues in wordnet

**Verbs are linguistic** rather than ontological categories.

**Ontologies capture the events** that verbs denote rather than verbs themselves.

→ We say (he learns, he learned, he is learning, the learning he .., ) referring to the exact same learning event.

# Formal/Ontological issues in wordnet

Who/How to decide on the accuracy?

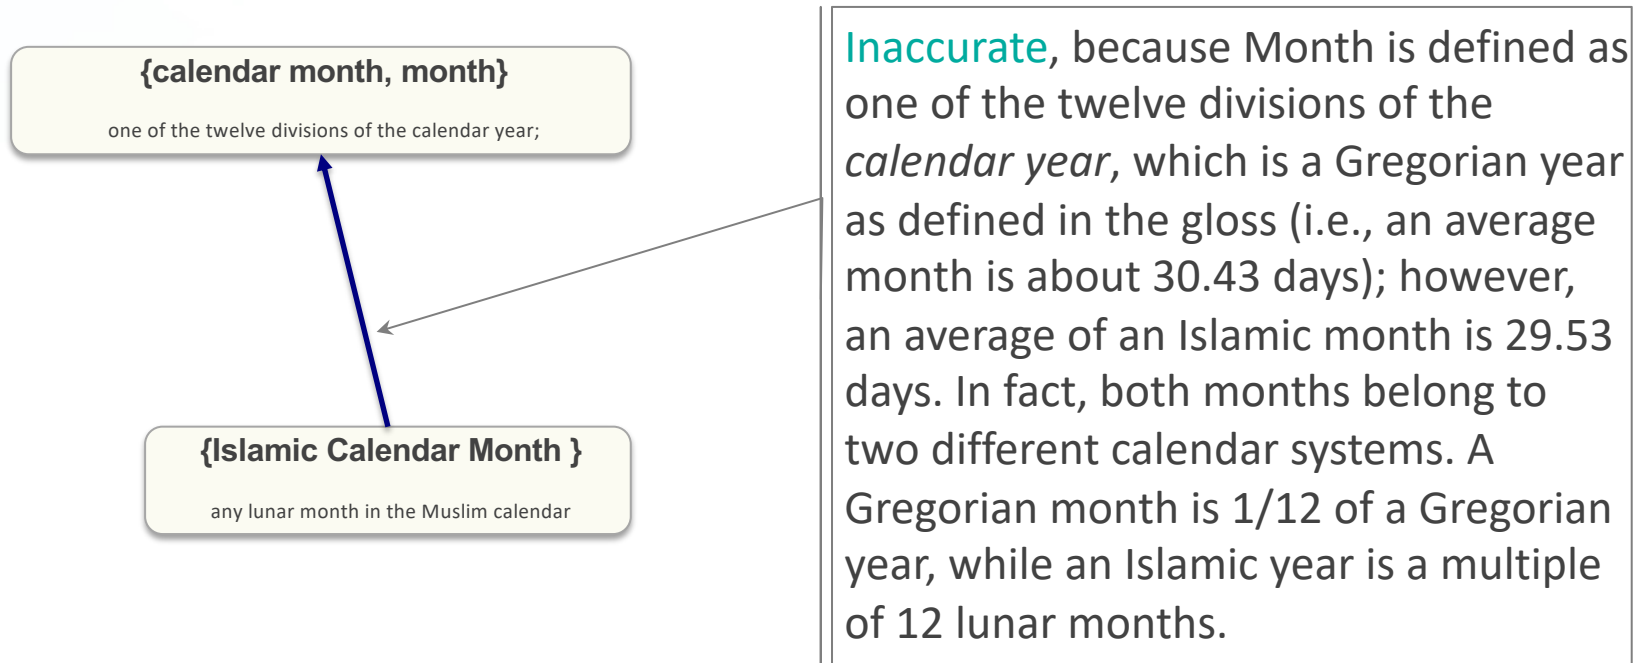

**{complex number, imaginary number,  
complex quantity, imaginary}**

(mathematics) a number of the form  $a+bi$  where  $a$  and  $b$  are real numbers and  $i$  is the square root of  $-1$

**not synonyms**, Imaginary number is only a special case of a Complex number. Similarly, WordNet provides a poor classification of the types of numbers, e.g., Real, Rational, Natural, and Integer numbers are all subsumed by Number, while they subsume each other.

# Formal/Ontological issues in wordnet

Who/How to decide on the accuracy?
